In the article titled "ECG Markers of Hemodynamic Improvement in Patients with Pulmonary Hypertension" [1], there was an error in the key of Figure 2, which should be corrected as follows:

![Figure 2: Electrocardiographic predictors of hemodynamic improvement. \( \Delta R_{v1} \) (AUC: 0.75, 95% CI: 0.63–0.84, \( p = 0.0005 \)), \( \Delta \max R_{V1,2} + \max S_{LaVL} \) – \( SV_{1} \) (AUC: 0.73, 95% CI: 0.63–0.82, \( p < 0.0001 \)) and \( \Delta P_{II} \) (AUC: 0.67, 95% CI: 0.56–0.77, \( p = 0.007 \)).](image)
