Table S1. Relative abundance of different intestinal microbial groups, calculated as a percentage (mean \pm standard deviation) of the total microbial counts, at time 0 and after eight days of daily administration of *B. animalis* subsp. *lactis* IPLA 20020 (fresh culture or lyophilized) or *L. gasseri* IPLA 20212 (fresh culture), and a placebo (control) to adult BALB/c mice. Total counts at each sampling time are indicated as log n° cells/g

Table S2. Molar proportions of the major SCFA (acetate, propionate, and butyrate), calculated as a percentage of the total SCFA (sum of concentrations of the three major SCFA expressed in mM) at time 0 and after eight days of daily administration of *B. animalis* subsp. *lactis* IPLA 20020 (fresh culture or lyophilized) or *L. gasseri* IPLA 20212 (fresh culture), and a placebo (control) to adult BALB/c mice. Ratios between some SCFA are also indicated.
