Special Issue on
Cardiac Arrhythmias

CALL FOR PAPERS

In recent years, the field of cardiac arrhythmias has experienced vast developments with significant direct impact on patient management. The introduction of novel oral anticoagulants as antithrombotic therapy in patients with atrial fibrillation, the improvement of catheter ablation with 3-dimensional mapping systems and especially the development of ablation techniques for the treatment of atrial fibrillation, the wide application of cardiac resynchronization therapy for the treatment of patients with heart failure and of defibrillator therapy as a very effective method for prevention of sudden cardiac death are only some of the factors that have revolutionized the management of patients with cardiac arrhythmias.

We invite investigators to contribute original research articles as well as review articles covering the whole field of cardiac arrhythmias.

Potential topics include, but are not limited to:

- ▶ Anticoagulation treatment for patients with atrial fibrillation with special emphasis on novel oral anticoagulants
- ▶ Catheter ablation of atrial fibrillation
- ▶ Other aspects of conservative management of atrial fibrillation, such as the choice of rhythm or rate control
- ▶ Catheter ablation for ventricular tachycardia in patients with structural heart disease
- ▶ Cardiac resynchronization therapy for the treatment of patients with heart failure
- ▶ Defibrillator therapy for primary or secondary prevention of sudden cardiac death
- ▶ Treatment of postoperative arrhythmias in young patients after surgery for congenital heart disease
- ▶ Treatment of arrhythmias in adult patients with congenital heart disease

Authors can submit their manuscripts via the Manuscript Tracking System at <http://mts.hindawi.com/submit/journals/bmri/cardiology/caarr/>.
