Intrafamilial spread of hepatitis B: Passage through several generations
A Szilagyi, JM Chan-Thin, IG Fantus
Can J Gastroenterol 1993;7:23-27

The statements (page 24, column 3):

"Anti-HBeAg antibodies were measured by Enzyme Immunoassay (Ortho Diagnostics)," (first para)

and

"In addition, serology for anti-HBc was negative in five sisters of Gen. III and two of their spouses." (third para)

should have referred to HCV (hepatitis C virus).

The error is regretted.
