

Special Issue on
Circulating Biomarkers in Gynecological Cancer

CALL FOR PAPERS

Circulating biomarkers are considered as indicator markers diagnosing the disease or its progression and following the response to a drug. Various circulating biomarkers are identified including essentially nucleic acid biomarkers, protein biomarkers, extracellular vesicles-based biomarkers, and circulating tumor cells.

Circulating biomarkers are easily accessible markers issued from blood, saliva, or urine that deserve huge information about diseases. The editors of Journal of Immunology Research are pleased to launch a new issue dedicating to circulating biomarkers in gynecological cancer and their applications. The journal will publish peer-reviewed high quality articles either original research articles as well as review articles. Articles from different disciplines are welcome.

Potential topics include but are not limited to the following:

- ▶ Circulating biomarkers and their correlation to disease progression
- ▶ Circulating biomarkers and their predictive role of therapy responses
- ▶ Extracellular vesicles as biomarker and their functions
- ▶ Cancer biomarkers (circulating tumor cells, biomarkers of cancer stem cells, etc.)
- ▶ Nucleic acid biomarkers (micro-RNA, circulating nucleic acid, microsatellite instability, etc.)
- ▶ Protein biomarkers (cytokines, soluble HLA, etc.)
- ▶ Metabolic biomarkers
- ▶ Immunologic biomarkers

Authors can submit their manuscripts through the Manuscript Tracking System at <http://mts.hindawi.com/submit/journals/dm/cibic/>.
