There were errors that occurred in the captions of Figures 2 and 3.

The corrections of errors in these captions should be as follows.

Figure 2: Duration of transient worsening during steroids pulse therapy. Most of the worsening occurs between 3 and 5 days in the treatment group and between 3 and 10 days in the control group. D: day.

Figure 3: The effect results were shown in both groups with different treatment.

RE: recovery; BR: basic recovery; MI: marked improvement; IM: improvement; IN: ineffectiveness.
