

Special Issue on  
**Drug Design and Repositioning for Breast Cancer  
Treatment**

# CALL FOR PAPERS

A fraction of Breast Cancer patients do not respond to pharmacological therapy or exhibit aggressive subtypes for which there are no targeted therapies available. Thus, despite the recent advances in the treatment of Breast Cancer, new drugs are still required. Both, target-based drug design and the identification of anticancer activity of drugs with other therapeutic uses (drug repositioning) are approaches with the potential to develop new effective agents for Breast Cancer treatment.

This special Issue will compile papers centered on the discovery of drugs for Breast Cancer using the above approaches. Thus, we invite authors to contribute original research articles as well as timely reviews focusing on the conception of new pharmacological agents and their biological evaluation in relevant Breast Cancer models.

Potential topics include but are not limited to the following:

- ▶ Rational design of new compounds
- ▶ Drug repositioning
- ▶ Validation of drugs combination
- ▶ Development of new models for drug screening
- ▶ Pharmacological targeting of cancer stem cells

Authors can submit their manuscripts through the Manuscript Tracking System at <https://mts.hindawi.com/submit/journals/ijbc/ddrb/>.

Papers are published upon acceptance, regardless of the Special Issue publication date.

**Lead Guest Editor**

Marco A. Velasco-Velazquez,  
Universidad Nacional Autónoma de  
México, Mexico City, Mexico
