(Received May 6, 1992)

ABSTRACT. In this paper, a generalization of a theorem of Mishra and Srivastava [4] on \(|C,1|_k\) summability factors has been proved.

KEY WORDS AND PHRASES. Absolute summability, summability factors, infinite series.

1991 AMS SUBJECT CLASSIFICATION CODES. 40D15, 40F05, 40G99.

1. INTRODUCTION.

Let \(\Sigma a_n\) be a given infinite series with partial sums \((s_n)\). We denote by \(u_n\) the \(n\)-th \((C,1)\) mean of the sequence \((s_n)\). The series \(\Sigma a_n\) is said to be summable \(|C,1|_k, k \geq 1\), [2] if

\[
\sum_{n=1}^{\infty} n^{k-1} |u_n - u_{n-1}|^k < \infty.
\] (1.1)

Let \((p_n)\) be a sequence of positive real numbers such that

\[
P_n = \sum_{v=0}^{n} p_v \to \infty \text{ as } n \to \infty, \quad (P_{-1} = p_{-1} = 0, i \geq 1).
\] (1.2)

The sequence-to-sequence transformation

\[
t_n = \frac{1}{P_n} \sum_{v=0}^{n} p_v s_v
\] (1.3)
defines the sequence \((t_n)\) of the \((\bar{N}, p_n)\) mean of the sequence \((s_n)\), generated by the sequence of coefficients \((p_n)\) (see [3]).

The series \(\Sigma a_n\) is said to be summable \(|\bar{N}, p_n|_k, k \geq 1\), if (see [1])

\[
\sum_{n=1}^{\infty} (P_n/p_n)^{k-1} |t_n - t_{n-1}|^k < \infty.
\] (1.4)

In the special case when \(p_n = 1\) for all values of \(n\), then \(|\bar{N}, p_n|_k\) summability is the same as \(|C,1|_k\) summability.

2. PRELIMINARY RESULT.

Mishra and Srivastava [4] proved the following theorem for \(|C,1|_k\) summability.

THEOREM A. Let \((X_n)\) be a positive non-decreasing sequence and there be sequences \((\beta_n)\) and \((\lambda_n)\) such that

\[
|\Delta \lambda_n| \leq \beta_n
\] (2.1)
\[ \beta_n \to 0 \text{ as } n \to \infty \quad (2.2) \]
\[ |\lambda_n|X_n = 0(1) \text{ as } n \to \infty \quad (2.3) \]
\[ \sum_{n=1}^{\infty} n |\Delta \beta_n|X_n < \infty. \quad (2.4) \]

If
\[ \sum_{n=1}^{m} \frac{1}{n!} |s_n|^k = 0(X_m) \text{ as } m \to \infty. \quad (2.5) \]

then the series \( \Sigma a_n \lambda_n \) is summable \( |C,1|_k, k \geq 1 \).

3. MAIN RESULT.

The aim of this paper is to generalize Theorem A for \( |\tilde{N}, p_n|_k \) the summability in the form of the following theorem.

**THEOREM.** Let \((X_n)\) be a positive non-decreasing sequence and the sequences \((\beta_n)\) and \((\lambda_n)\) such that conditions (2.1) - (2.4) of Theorem A are satisfied. Furthermore, if \((p_n)\) is a sequence of positive numbers such that
\[ P_n = 0(np_n) \quad (3.1) \]
\[ \sum_{n=1}^{m} \frac{P_n}{P_n^2} |s_n|^k = 0(X_m) \text{ as } m \to \infty, \quad (3.2) \]

then the series \( \Sigma a_n \lambda_n \) is summable \( |\tilde{N}^\ast, p_n|_k, k \geq 1 \).

**REMARK.** It should be noted that if we take \( p_n = 1 \) for all values of \( n \), then the condition (3.2) will be reduced to the condition (2.5). Also noticed that, in this case condition (3.1) is obvious.

4. We need the following lemma for the proof of our theorem.

**LEMMA ([4]).** Under the conditions on \((X_n),(\beta_n)\) and \((\lambda_n)\) as taken in the statement of the theorem, the following conditions hold, when (2.4) is satisfied
\[ n \beta_n X_n = 0(1) \text{ as } n \to \infty \quad (4.1) \]
\[ \sum_{n=1}^{\infty} \beta_n X_n < \infty. \quad (4.2) \]

5. PROOF OF THE THEOREM. Let \((T_n)\) be the \((\tilde{N}, p_n)\) mean of the series \( \Sigma a_n \lambda_n \). Then, by definition, we have
\[ T_n = \frac{1}{P_n} \sum_{u=0}^{n} \sum_{w=0}^{u} a_w \lambda_w = \frac{1}{P_n} \sum_{u=0}^{n} (P_n - P_{u-1})a_u \lambda_u. \]

Then, for \( n \geq 1 \), we have
\[ T_n - T_{n-1} = \frac{P_n}{P_n P_{n-1}} \sum_{u=1}^{n} P_{u-1} a_u \lambda_u. \]

Applying Abel's transformation, we have
\[ T_n - T_{n-1} = \frac{P_n}{P_n P_{n-1}} \sum_{u=1}^{n-1} \Delta(P_{u-1} \lambda_v) s_v + \frac{P_n}{P_n} s_n \lambda_n = -\frac{P_n}{P_n P_{n-1}} \sum_{v=1}^{n-1} P_v \Delta \lambda_v s_v + \frac{P_n}{P_n} s_n \lambda_n = T_{n,1} + T_{n,2} + T_{n,3}, \text{ say.} \]
To prove the theorem, by Minkowski's inequality, it is sufficient to show that
\[ \sum_{n=1}^{\infty} \left( \frac{P_n}{p_n} \right)^{k-1} |T_{n,w}|^k < \infty \text{ for } w = 1, 2, 3. \]

Now, applying Hölder's inequality, we have \((k > 1)\)
\[
\sum_{n=2}^{m+1} \left( \frac{P_n}{p_n} \right)^{k-1} |T_{n,1}|^k \leq \sum_{n=2}^{m+1} \frac{p_n}{P_n^{k-1}} \left\{ \sum_{v=1}^{n-1} s_v |\lambda_v|^k \right\} \times \left\{ \sum_{v=1}^{n-1} p_v \right\}^{k-1}
\]
\[
= 0(1) \sum_{v=1}^{m} p_v |s_v|^k |\lambda_v|^k \sum_{n=1}^{m+1} \frac{p_n}{P_n} = 0(1) \sum_{v=1}^{m} p_v |s_v|^k |\lambda_v|^k.
\]

Since \(|\lambda_v| = 0(1/X_n) = 0(1)\), by (2.3), we have that
\[
\sum_{n=2}^{m+1} \left( \frac{P_n}{p_n} \right)^{k-1} |T_{n,1}|^k = 0(1) \sum_{v=1}^{m} p_v |s_v|^k |\lambda_v|^k = 0(1) \sum_{v=1}^{m} p_v |s_v|^k |\lambda_v|^k
\]
\[
= 0(1) \sum_{v=1}^{m-1} |\Delta \lambda_v | X_v + 0(1) |\lambda_m | X_m = 0(1) \sum_{v=1}^{m-1} \beta_v X_v + 0(1) |\lambda_m | X_m = 0(1)
\]
as \(m \to \infty\), by the hypotheses of the theorem and lemma.

Using the fact that \(|\Delta \lambda_n| \leq \beta_n \) and \(P_n = 0(np_n)\), and after applying the Hölder's inequality, we get that
\[
\sum_{n=2}^{m+1} \left( \frac{P_n}{p_n} \right)^{k-1} |T_{n,2}|^k \leq \sum_{n=2}^{m+1} \frac{p_n}{P_n^{k-1}} \left\{ \sum_{v=1}^{n-1} v\beta_v p_v |s_v|^k \right\}^{k}
\]
\[
= 0(1) \sum_{v=1}^{m-1} \left\{ \sum_{n=2}^{m+1} \frac{p_n}{P_n^{k-1}} \right\}^{k-1}
\]
\[
= 0(1) \sum_{v=1}^{m-1} (v\beta_v)p_v |s_v|^k \sum_{n=1}^{m+1} \frac{p_n}{P_n} = 0(1) \sum_{v=1}^{m} (v\beta_v)p_v |s_v|^k.
\]

Since \(n\beta_n = 0(1/X_n) = 0(1)\), by (4.1), we have that
\[
\sum_{n=2}^{m+1} \left( \frac{P_n}{p_n} \right)^{k-1} |T_{n,2}|^k = 0(1) \sum_{v=1}^{m} (v\beta_v)^k |s_v|^k = 0(1) \sum_{v=1}^{m} \beta_v p_v |s_v|^k
\]
\[
= 0(1) \sum_{v=1}^{m-1} |\Delta (v\beta_v) | X_v + 0(1)m\beta_m X_m = 0(1) \sum_{v=1}^{m-1} v |\Delta \beta_v | X_v + 0(1) \sum_{v=1}^{m-1} \beta_v X_v
\]
by virtue of the hypothesis and lemma.

Finally, as in $T_{n,1}$, we get that

$$
\sum_{n=1}^{m} (P_n/p_n)^{k-1} |T_{n,3}|^k = \sum_{n=1}^{m} \frac{p_n}{p_n} |s_n|^k |\lambda_n|^k = O(1) \text{ as } m \to \infty.
$$

Therefore, we get

$$
\sum_{n=1}^{m} (P_n/p_n)^{k-1} |T_{n,w}|^k = O(1) \text{ as } m \to \infty, \text{ for } w = 1, 2, 3.
$$

This completes the proof of the theorem.
