

Special Issue on Complications of Diabetes

Call for Papers

Diabetes represents an emerging global epidemic and one of the leading causes of morbidity and mortality. Its insidious and chronic nature often increases the threat posed. Diabetes has been justly labelled as the “silent epidemic.” It is estimated that approximately 366 million had diabetes in 2011 worldwide and by 2030 this number will rise to 552 million.

Complications of diabetes are very common and may even present at diagnosis. They affect various parts and functions of the human body, leading to disability, reduced quality of life, and death. Traditionally, diabetic complications are classified as macro- and microvascular. Macrovascular complications include coronary artery disease, peripheral arterial disease, and stroke, while microvascular complications include diabetic nephropathy, neuropathy, and retinopathy.

Given the increasing number of patients with diabetic complications worldwide, there is no doubt that a better understanding of these complications, including the underlying mechanisms, is very important and might contribute to new treatment options.

We would like to invite investigators to submit original research articles or review articles that will improve our understanding of the diagnosis, pathogenesis (including novel molecular mechanisms), pathophysiology, treatment, and prognosis of these complications. Potential topics include, but are not limited to:

- The diagnosis, pathogenesis, and clinical management of diabetic foot, diabetic neuropathy, diabetic nephropathy, diabetic retinopathy, peripheral arterial disease, coronary heart disease, stroke, vascular damage and endothelial dysfunction, infections in patients with diabetes, and intestinal and liver complications due to diabetes
- The diagnosis and evaluation of treatment efficacy
- Advances in molecular genetics and molecular diagnostics
- New insights into treatment

Before submission authors should carefully read over the journal’s Author Guidelines, which are located at

<http://www.hindawi.com/journals/jdr/guidelines/>. Prospective authors should submit an electronic copy of their complete manuscript through the journal Manuscript Tracking System at <http://mts.hindawi.com/submit/journals/jdr/codi/> according to the following timetable:

Manuscript Due	Friday, 4 July 2014
First Round of Reviews	Friday, 26 September 2014
Publication Date	Friday, 21 November 2014

Lead Guest Editor

Konstantinos Papatheodorou, Diabetes Clinic, Second Department of Internal Medicine, Democritus University of Thrace, 68100 Alexandroupolis, Greece; kapatheo@yahoo.gr

Guest Editors

Maciej Banach, Department of Hypertension, Medical University of Lodz, Lodz, Poland; maciejbanach@aol.co.uk

Michael Edmonds, Diabetic Foot Clinic, King’s College Hospital, London, UK; me@edmonds45.freeserve.co.uk

Nikolaos Papanas, Diabetic Foot Clinic and Diabetes Clinic, Second Department of Internal Medicine, Democritus University of Thrace, 68100 Alexandroupolis, Greece; papanasnikos@yahoo.gr

Dimitrios Papazoglou, Diabetes Clinic, Second Department of Internal Medicine, Democritus University of Thrace, 68100 Alexandroupolis, Greece; dpapazog@med.duth.gr
