

FIGURE SUPPLEMENTARY

Supplementary Figure. Modification of APCs populations induced by CRMs aerosolization in N202.1A tumor

Bars (mean± SEM) and representative dot plots of the percentage of AMs (identified as CD45+/FL-1+CD11c+ cells), CD103+ DCs (identified as CD45+/CD11b-/CD103+CD11c+ cells) and plasmacytoid DCs (identified as CD45+/CD11c+/B220+mPDCA-1+ cells) evaluated in lung suspensions of 4/5 mice/group injected with N202.1A mammary carcinoma cells and aerosolized with saline or combined CRMs.
