MANTISPA INTERRUPTA AND M. BRUNNEA IN NEW ENGLAND.

In 1913 (*Psyche* Vol. 20 p. 170) the writer recorded a specimen of *M. interrupta* Say, from Lake Boone, Stowe, Mass. This year the collection of the Boston Society of Natural History has been enriched by two additional specimens. The first was taken by Mr. Henry A. MacDonald at Lake Cochituate, Natick, Mass., July 3, 1925, and the second by Mr. E. J. French, at Nutting's Pond, Billerica, Mass., July 6, 1925. All three specimens were taken on window screens.

In 1913 there was but one specimen of *M. brunnea* Say (Walpole, Mass.) in the Society's collection. Now there are the following additional specimens—Hampton, N. H., June 30, 1918 (S. A. Shaw), Milton, N. H. Aug. 20, 1923 (A. F. Magrew), Centerville, Mass., July 15 (C. J. Maynard) and Canton, Mass. June 25, 1919 (D. H. Linder).

C. W. JOHNSON

On July 13, 1925 Professor Ulric Dahlgren captured at Salisbury Cove, Mt. Desert, Me. a specimen of the white-banded day-sphinx, *Aellopos titans* Cram. It is considered by some authors to be a variety of *A. tantalus* Linn. This is probably the most northern record for this southern species. There is also in the collection of the Boston Society of Natural History a specimen of this moth, taken at Cohasset, Mass., a number of years ago.

C. W. JOHNSON.
