TSW Biochemistry and Molecular Biology welcomes submissions on all aspects of biochemistry and molecular biology, including original research papers, reviews and mini-reviews, short communications, methods and protocols, editorials and commentaries. The scope of this journal is wide ranging, some examples of topics might include general biochemistry, physical biochemistry, structure and dynamics of proteins, nucleic acids, carbohydrate or membranes, gene structure and expression, enzymology, bioenergetics, metabolic biochemistry, genomics and proteomics. This list is not exclusive, and authors are encouraged to submit articles on any aspect of biochemistry and molecular biology of micro organisms, plants, animals or humans. We encourage cross-linking articles with other relevant domains. In line with *TheScientificWorldJOURNAL* general policy, this domain seeks to enable rapid and wide dissemination of peer-reviewed publications.
