Applying mobile and wireless technologies to the health informatics arena has proven to be a timely topic of interest here. Our special issue has chosen 9 publications from a field of competitive submissions, which we feel best reflect reader’s interests, include a high level of novelty, and capture the essence of the topic. We feel that the scope of this special issue will remain of significant interest to the scientific community in the future as the potential applications of these technologies in the field of medicine have not nearly been exhaustively explored.

Conflicts of Interest

Editors declare that they have no conflicts of interest regarding the publication of this Special Issue.
