

Supplement for Ludvig et al.

This movie clip shows:

1. focal EEG seizure in the right frontal cortex pre-treated with artificial CSF (ACSF),
2. the “switch-on” electrical artifact by the minipump on the rat’s head,
3. the termination of the ongoing EEG seizure about 10 sec after the epidural delivery of 1.0 mM (50 μ l) muscimol with this minipump.

Right side/multineuron record.
