

Supplementary Figure 1. Original gels used in Western blots

Two gels were used per protein in each tissue. Each of them contained 3 samples from each group: control (C), rapamycin (R), valine (V) and rapamycin+Valine (RV). The sum of the two gels result in 6 samples per group as described in Materials and Methods

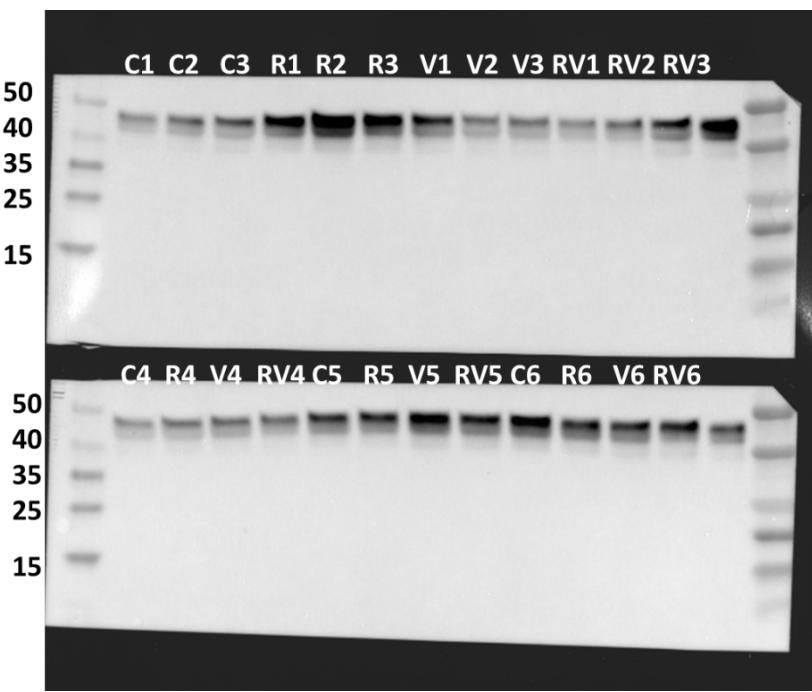

Bsx Hypothalamus (36 kDa)

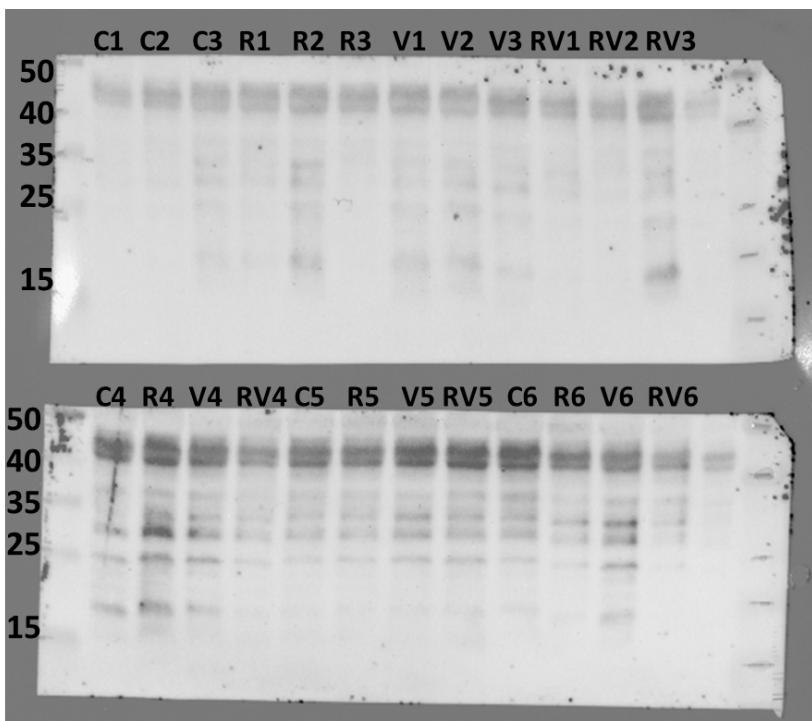

Bsx Telencephalon (36 kDa)

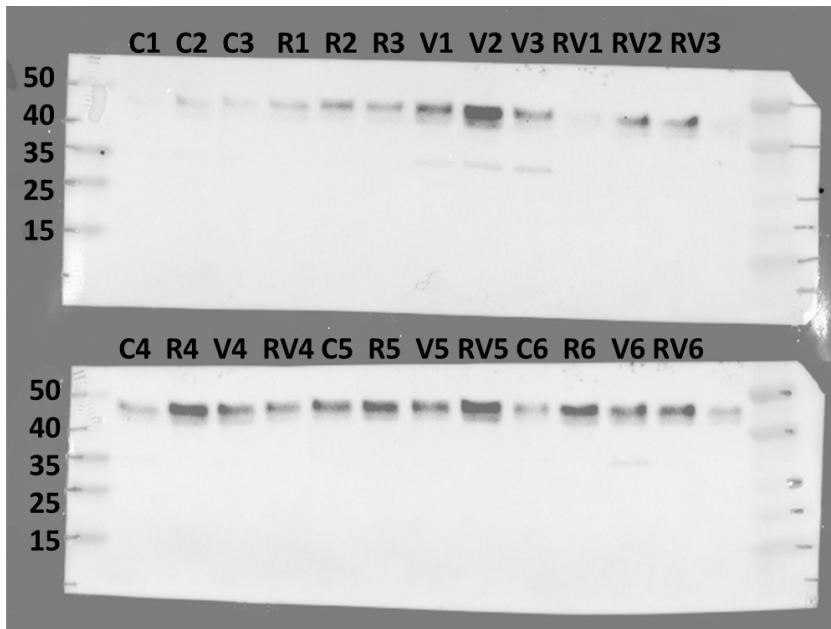

p-Creb Hypothalamus (43 kDa)

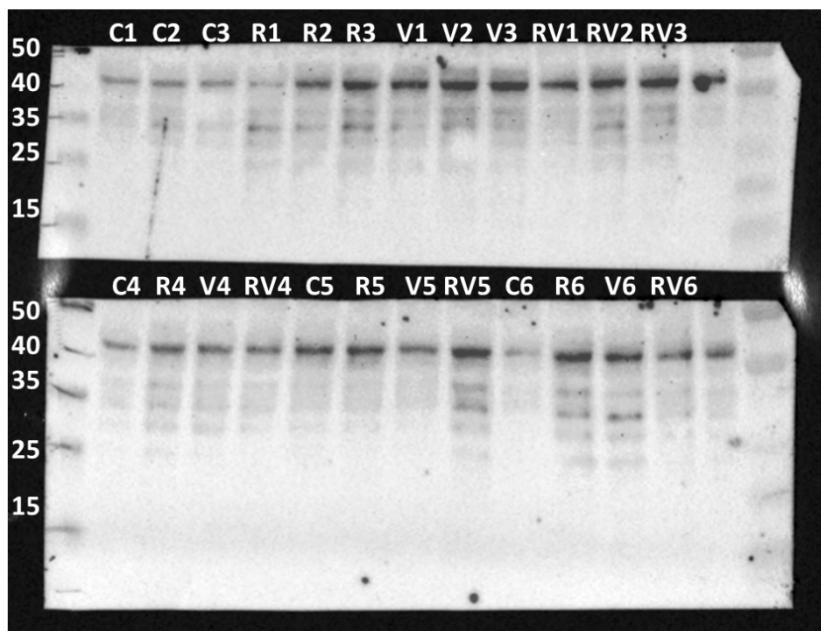

Creb Hypothalamus (43 kDa)

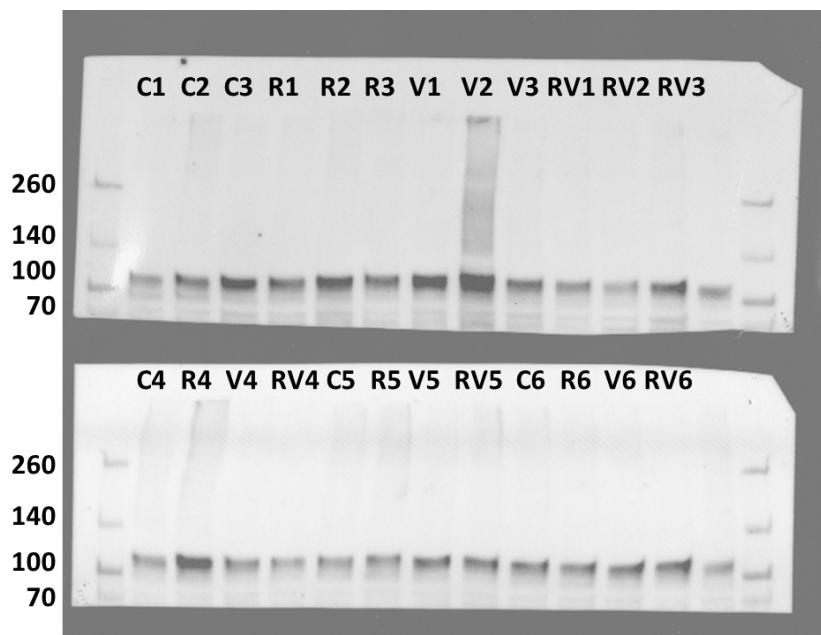

p-Creb Telencephalon (43 kDa)

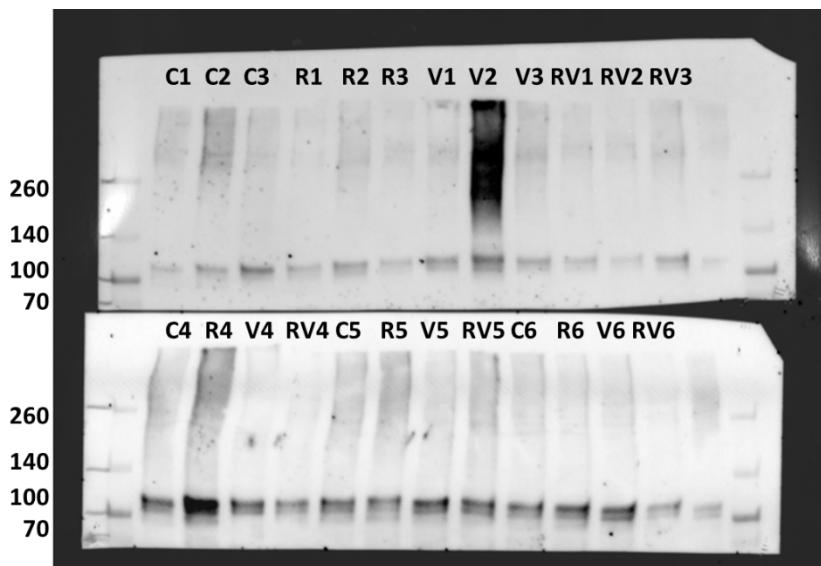

Crebl Telencephalon (43 kDa)

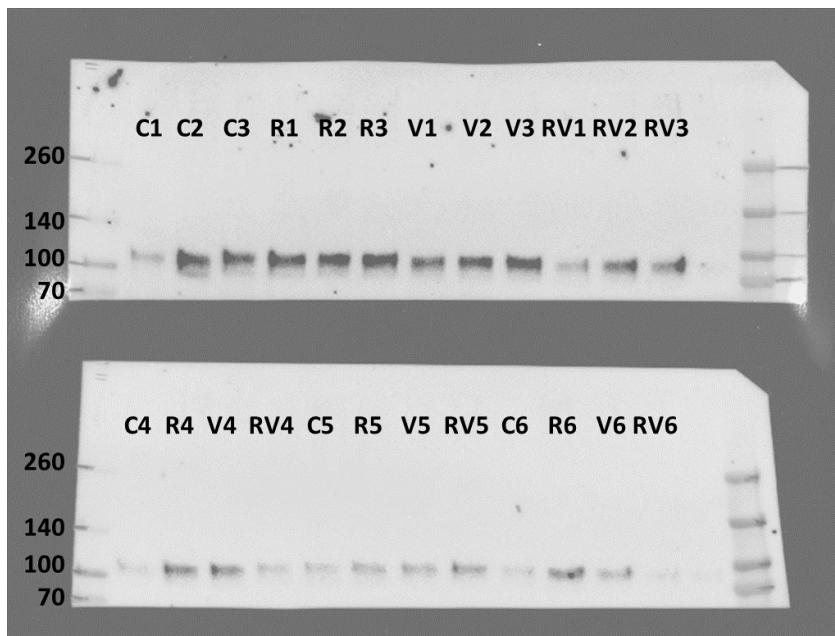

p-Foxo1 Hypothalamus (78-82 kDa)

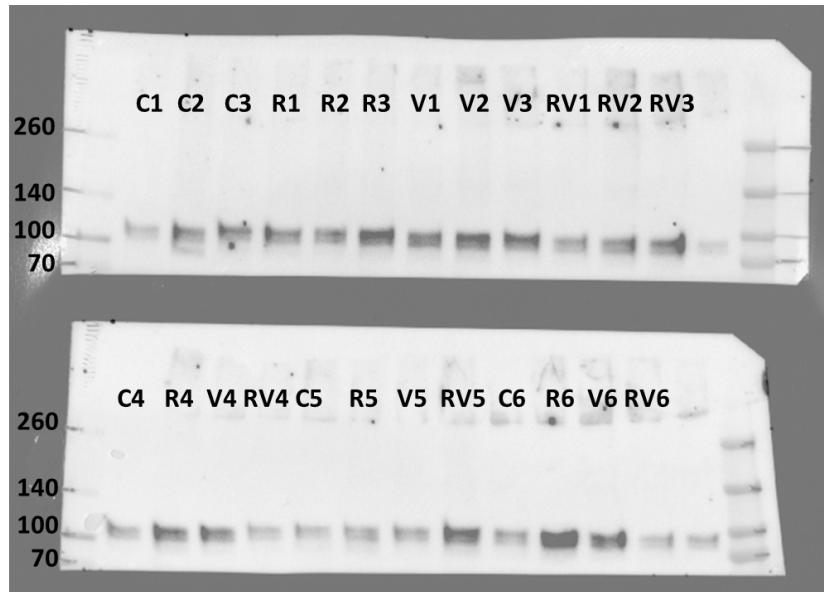

Foxo1 Hypothalamus (78-82 kDa)

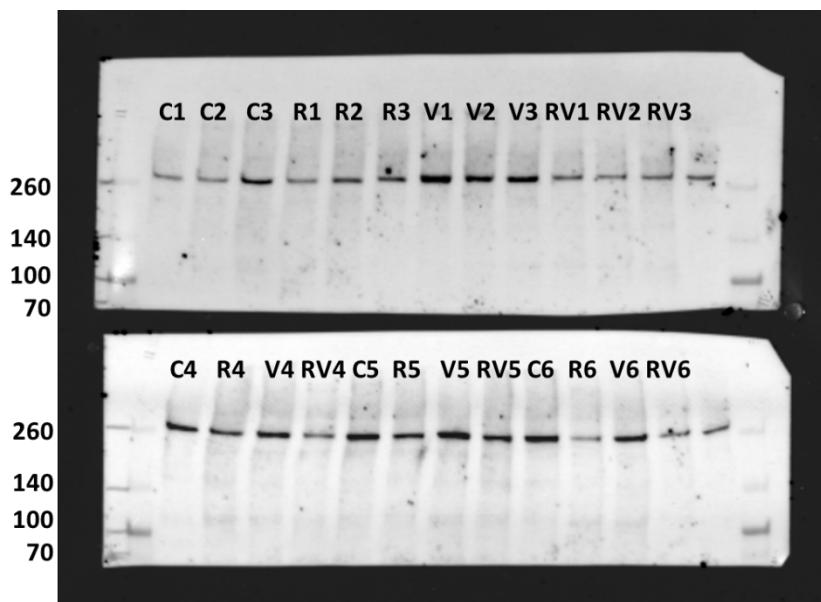

p-Foxo1 Telencephalon (78-82 kDa)

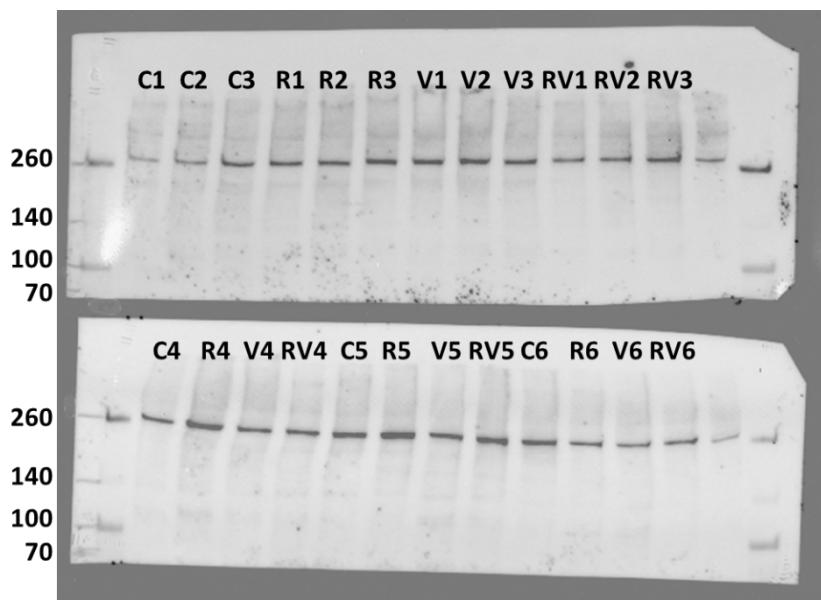

Foxo1 Telencephalon (78-82 kDa)

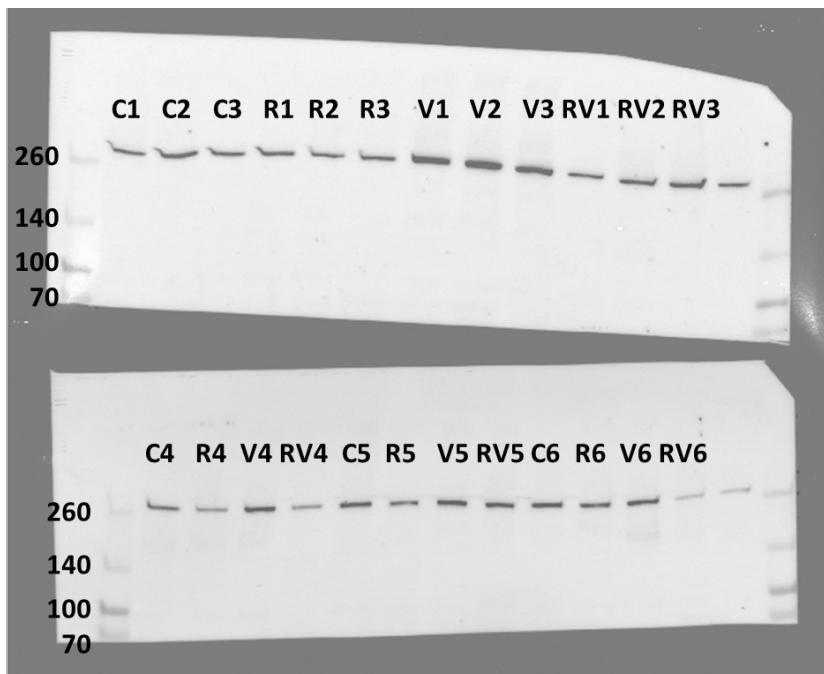

p-mTor Hypothalamus (290 kDa)

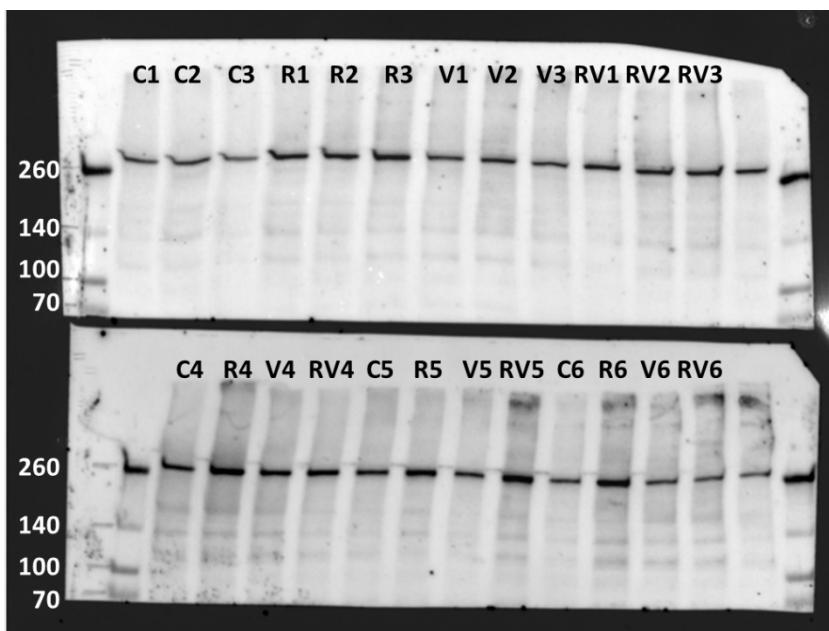

mTor Hypothalamus (290 kDa)

p-mTor Telencephalon (290 kDa)

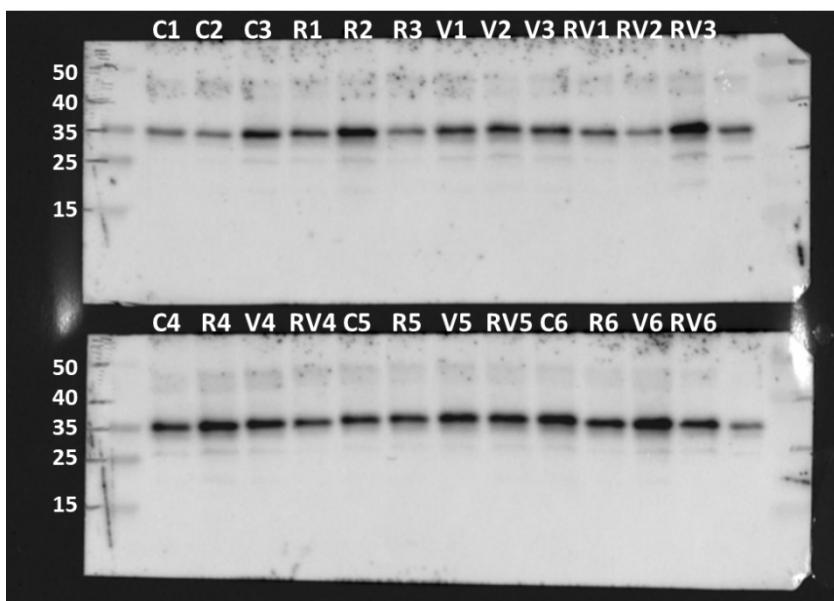

mTor Telencephalon (290 kDa)

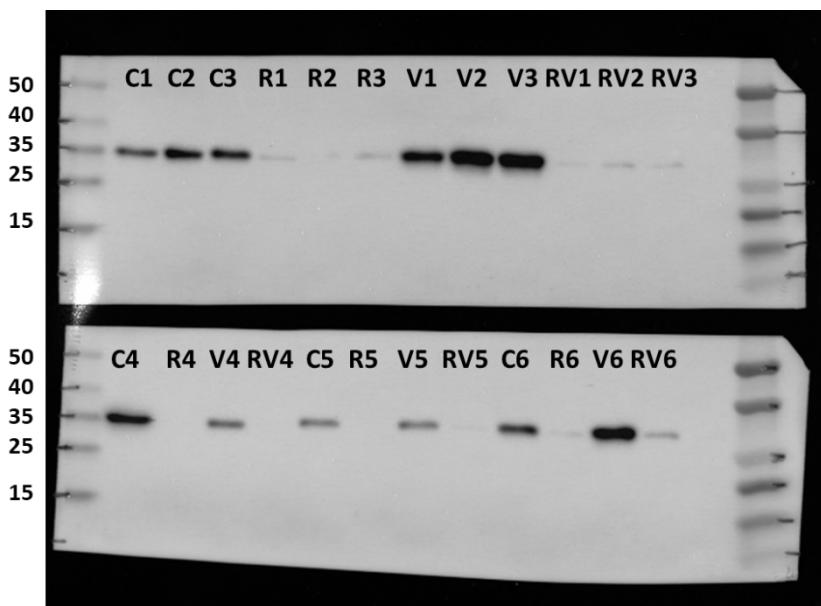

p-S6 Hypothalamus (32 kDa)

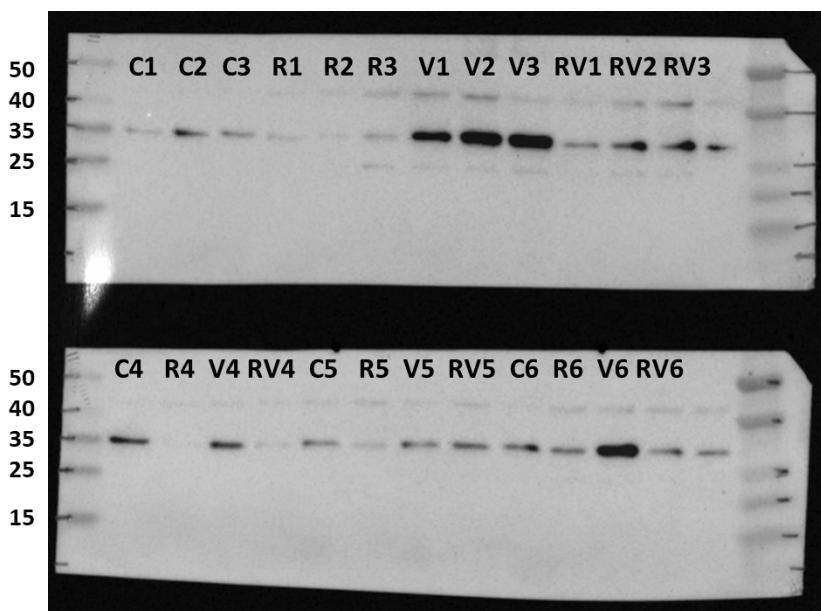

S6 Hypothalamus (32 kDa)

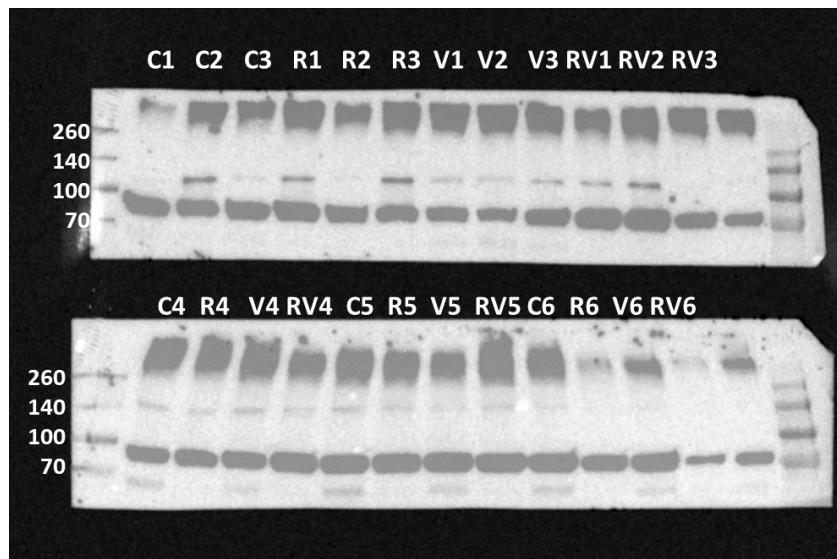

p-S6 Telencephalon (32 kDa)

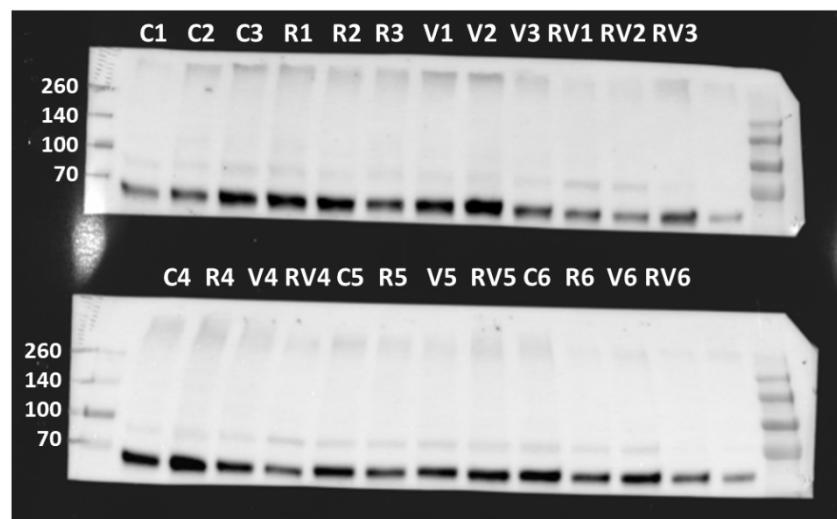

S6 Telencephalon (32 kDa)

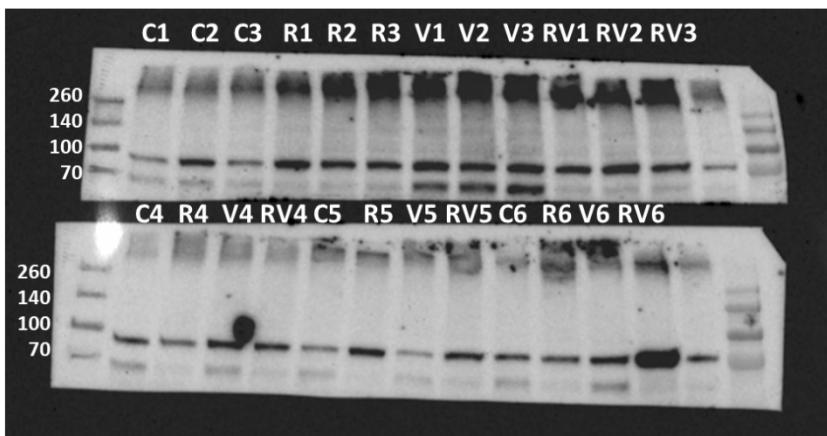

p-S6K1 Hypothalamus (70 kDa)

S6K1 Hypothalamus (70 kDa)

p-S6K1 Telencephalon (70 kDa)

S6K1 Telencephalon (70 kDa)
