

1 **Supplementary File 1**

2

Isolate No.	Colony size	Colony pigmentation	Colony form	Colony margin	Colony elevation	Taxonomic affiliation based on 16S rDNA sequence	Ammonium nitrogen removal (%)
R11	Large	White	Irregular	Serrate	Flat	In progress	48.57
R12	Moderate	Light Yellow	Circular	Entire	Flat	<i>Bacillus</i> sp.	51.24
R13	Moderate	White	Circular	Entire	Umbonate	In progress	55.32
R14	Small	White	Circular	Entire	Raised	In progress	52.41
R15	Large	White	Irregular	Undulate	Flat	In progress	67.54
R16	Small	White	Irregular	Entire	Raised	In progress	58.22
R30	Moderate	Light Yellow	Circular	Entire	Flat	In progress	64.21
R31	Moderate	Yellow	Circular	Entire	Flat	<i>Chryseobacterium</i> sp.	95.87
R32	Moderate	White	Circular	Entire	Flat	<i>Exiguobacterium aurantiacum</i>	61.25
S18	Pin Point	White	Circular	Entire	Raised	<i>Achromobacter xylosoxidans</i>	97.2

1 **Supplementary file 2**

2 **Morphological and physiological characteristics of *Chryseobacterium* sp. R31**

3

4 **Morphology**

5

6 Colony morphology (nutrient agar)	Circular, yellowish, opaque, entire edges
7 Motility	Non-motile
8 Gram-staining	Negative

9

10 **Growth conditions**

11

12 Temperature range	Good growth at 25–42 °C
13 pH range	6.0–7.5
14 Relation to oxygen	Obligate aerobic
15 Growth in the presence of 7% NaCl	Positive

16

17 **Physiological characteristics**

18

19 Negative	Acid production from sucrose, lactose, xylose, sorbitol, inositol, trehalose and manitol, catalase, urease, lysine decarboxylase, <i>o</i> -nitrophenyl-β-galactoside, DNA hydrolysis, Indole test, flexirubin pigment, starch hydrolysis, Voges Proskauer test, methyl-red test, Simmons citrate
----------------	---

25

26 Positive	Acid production from glucose, fructose, arabinose, maltose, galactose and mannose, indophenols oxidase, nitrate reduction, arginine dihydrolase, aesculin hydrolysis, gelatin liquefaction, Tween 80 hydrolysis, tyrosine hydrolysis, H ₂ S production
----------------	---

32

33 **Sole carbon source utilization test**

34

35 Negative	Sucrose, lactose, xylose, sorbitol, inositol, trehalose, mannitol, phenol, ethanol, sodium citrate and sodium acetate
----------------	---

37

38 Positive	Glucose, fructose, arabinose, maltose, galactose, mannose, glycerol, methanol and sodium succinate.
----------------	---

41

42

43

44

1	
2	Sole nitrogen source utilization test
3	
4	Negative Urea, cobaltous nitrate and casamino acid
5	
6	Positive Ammonium molybdate, ammonium nitrate, calcium nitrate, potassium nitrate, ammonium chloride, ammonium sulphate, sodium nitrate, sodium glutamate and peptone
7	
8	
9	
10	
11	Amino acid utilization test
12	
13	Negative Methionine, glycine, aspartic acid, glutamic acid, glutamine, asparagine, leucine and cystine
14	
15	
16	Positive Tyrosine, tryptophan, serine, isoleucine, OH-proline, lysine, histidine, arginine, cysteine, valine, phenylalanine, threonine, proline and alanine
17	
18	
19	
20	
21	Antibiotic susceptibility/resistance characteristics
22	
23	Susceptible Carbenicillin, oleandomycin, chloramphenicol, tetracycline, kanamycin, lincomycin and vancomycin
24	
25	
26	
27	Resistant Gentamycin, streptomycin, ampicillin, penicillin-G and neomycin
28	
29	
30	
31	

1 **Supplementary File 3**

2
 3 Results of the identity analysis of strain *Chryseobacterium* sp. R31 based on 16S rRNA gene
 4 sequence performed on the EzTaxon server (last accessed on 20/02/2014). 1373 bp 16S
 5 rRNA gene of *Chryseobacterium* sp. R31 has NCBI Accession No. KF751764

Rank according to similarity	Species Name	NCBI Accession No.	Pairwise similarity (%)	Dissimilar nucleotides/total nucleotides
1	<i>Chryseobacterium haifense</i> H38 ^T	EF204450	98.25	24/1371
2	<i>Amoebinatus massiliae</i> 7Ebis	AF531765	97.60	33/1373
3	<i>Chryseobacterium anthropi</i> NF 1366 ^T	AM982786	97.52	34/1369
4	<i>Chryseobacterium pallidum</i> 26-3St2b ^T	AM232809	96.72	45/1371
5	<i>Chryseobacterium carnis</i> NCTC 13525 ^T	JX100817	96.70	45/1365
6	<i>Chryseobacterium hominis</i> NF802 ^T	AM261868	96.43	49/1372
7	<i>Chryseobacterium molle</i> DW3 ^T	AJ534853	96.42	49/1369
8	<i>Chryseobacterium hispanicum</i> VP48 ^T	AM159183	96.34	50/1366
9	<i>Chryseobacterium koreense</i> Chj707 ^T	AF344179	96.06	54/1371
