

## Supplementary Material

The Supplementary Materials include 1 supplementary table and 5 supplementary figures as follows.

Supplementary Table S1: Specificity test for *stn* LAMP assays.

Supplementary Figure S1: The nucleotide sequence of *stn* gene and primers used for LAMP assay, arrows indicate the position and direction of DNA synthesis.

Supplementary Figure S2: Phylogenetic tree derived from the entire *stn* sequence of members of various genera of the family *Enterobacteriaceae* determined by the Neighbor-Joining method. Numbers within the dendrogram indicate the occurrence (%) of branching in the 2000 bootstrapped tree. Branches corresponding to partitions reproduced in less than 50% of bootstrap replicates are collapsed.

Supplementary Figure S3: Electrophoresis analysis of *stn* LAMP amplified products without loop primer (3A) and with loop primers (3B) using different reaction times. Lane M: 100 bp DNA ladder as size markers, lanes 1-12: LAMP carried out for 5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 55 and 60 min, respectively; and lane 13: negative control (absence of DNA template).

Supplementary Figure S4: Specificity test for the *stn* LAMP assay. Lane M: 100 bp DNA ladder as size marker, lane 1: *S. Anatum*; lane 2: *S. Amsterdam*; lane 3: *S. Bangkok*; lane 4: *S. Choleraesuis*; lane 5: *S. Derby*; lane 6: *S. Enteritidis*, lane 7: *S. Paratyphi*, lane 8: *Citrobacter frundii*, lane 9: *Escherichia coli* K12, lane 10: *Enterococcus faecalis*, lane 11 *Enterobacter tarda*, lane 12: *Proteus vulgaris*, lane 13: *S. Typhimurium* ATCC 23566 as positive control, 14: negative control (no DNA template).

Supplementary Figure S5: Sensitivity of *stn* LAMP assays using purified DNA (A) and DNA from boiled cells (B). (A) Amount of purified DNA needed for detection of *stn* LAMP products. Lane M: 100 bp DNA ladder as size marker; lanes 1-6, reaction carried out using 5

fold-serial dilutions of standard genomic DNA at 3125 fg, 625 fg, 125 fg, 25 fg, 5 fg and 1 fg DNA/reaction, respectively; lane 7, negative control (no DNA template). (B) The number of *Salmonella* cells required for detection of *stn* by LAMP. Lane M: 100 bp DNA ladder as size marker; lanes 1-4, reaction carried out using DNA prepared directly from boil cells of  $10^3$ ,  $10^2$ , 10 and 1 cells/reaction, respectively; lane 5, negative control (no DNA template).
