

Supplementary Figure 1

**Supplement Figure 1** A Bar graph showed DCF intensity of 50  $\mu$ M GTN treatment in MDA-MB-231 cells for 1 to 24 hours. It exhibited significant alteration at *an hour* when compared to without treatment ( $p < 0.05$ ) but *there* was no significant change among groups at 1 to 12 hours ( $p > 0.05$ )
