In the article titled “Potential Factors for Psychological Symptoms at Three Months in Patients with Young Ischemic Stroke” [1], the authors identified two errors in Table 3 where “cm³” should be “mm³”. The corrected Table 3 is shown below.

TABLE 3

Variables	OR (95% CI)	P
Model for SCL-90-R		
Family function (moderate and serious dysfunction vs. good)	2.50 (1.71, 3.54)	<0.01
Hypertension (yes vs. no)	3.27 (1.92, 4.27)	0.02
Infarct size (≥ 20 vs. < 20 mm ³)	2.39 (1.53, 3.45)	<0.01
Model for depression		
Marital status (single vs. married)	1.23 (1.03, 1.54)	0.01
Family function (moderate and serious dysfunction vs. good)	1.21 (1.05, 1.45)	0.03
Infarct size (≥ 20 vs. < 20 mm ³)	1.74 (1.14, 3.13)	0.02
Model for somatization		
Family function (moderate and serious dysfunction vs. good)	2.32 (1.51, 2.80)	<0.01
Model for anxiety		
Hypertension (yes vs. no)	2.41 (1.54, 3.46)	0.03

Abbreviations: OR: odds ratio; CI: confidence interval; SCL-90-R: Symptom Checklist 90 Revised.
