

## **SUPPLEMENTARY MATERIAL**

The cognitive status was assessed by tasks exploring a wide range of cognitive domains: Mental Deterioration Battery (BDM) (revised version), Rey-Osterrieth complex figure, picture naming, Trail Making B, Babcock, aphasia and acalculia batteries (BADA, E.N.P.A.). The visual perceptual and spatial domains were explored by the Facial Expression of Emotion, unknown face identification, familiarity check and famous face recognition, Visual Object and Space Perception battery (VOSP), colour naming, Cortical Vision Screening Test (CORVIST), Navon's letter, letter cancellation, constructional apraxia, clock drawing, memory for faces and digital agnosia.
