

Table 3S: The result of multivariable logistic regression model with liver steatosis as binary outcome using 294 dB/m as cutoff without excluding people with extreme values on predictors.

Covariate	Coefficient	95%CI	P-value
Intercept	1.07	0.955- 1.2	0.36
Age	1.001	0.999-1.003	0.23
Hemoglobin A1c Reference (3.8-5.2)			
Hemoglobin A1c B (5.2-5.8)	1.04	0.99 -1.11	0.27
(5.8-6.3)	1.24	1.15 -1.35	0.03
(6.3-16.2)	1.45	1.31 -1.60	0.03
Male			
Female	0.92	0.89- 0.95	0.02
Reference (10-57 mg/dL)			
Triglyceride (57-132 mg/dL)	1.11	1.05- 1.18	0.08
Triglyceride (132-2684 mg/dL)	1.206	1.11- 1.32	0.05
Body Mass Index Reference (12.3-22.1)			
Body Mass Index (22.1-32.5)	1.07	1.03- 1.11	0.07
Body Mass Index (32.5-86.2)	1.518	1.44- 1.60	<0.01
Mets total A (0-1680)			
Mets total B (1680-5760)	0.951	0.90- 1.01	0.23
Mets total C (5760-561144)	0.957	0.90- 1.11	0.32
Alcohol (1-7)			
(7-10)	0.995	0.93- 1.07	0.90
(10-11)	0.95	0.91- 0.99	0.13
