

Supporting Information

Figure S1 Scatter diagram showing the association between total protein concentration and A2MG concentration in saliva based on Pearson's correlation analysis.

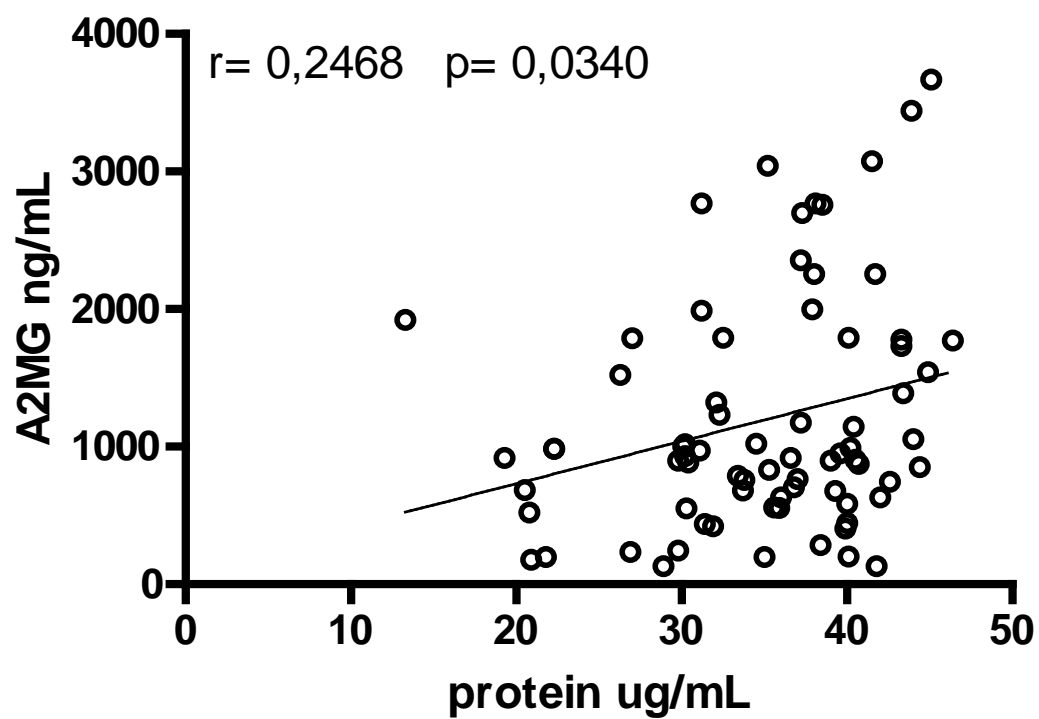

Figure S2 Bar graph showing the comparison of saliva levels of A2MG from whole saliva, parotid saliva and sublingual saliva between patients with adequate and inadequate glycemic control. Data represent a n=50; bars indicate SEM; ** p < 0.01. *** p < 0.001 indicates differences between patients with HbA1c percentage <7% and > 7%.
