

Figure 2

Figure 2S. Colour photomicrographs of Hematoxylin and eosin staining of the skin wound section of (a) untreated burn control rats on eighth post-wound day showing non-epithelialized (←) wound surface with slight edema and congestion. Skin wound section of SBT leaf extract (b) and silver sulfadiazine (c) treated burn wounds showing wound surface with well-organized thick epithelium (←). Neovascularization (BV) and collagen alignment is well developed in SBT leaf extract treated burn wounds. Scale bar 100 μ m. SBT, sea buckthorn.
