

Supplementary Figure. 1

Supplementary figure 1. Effects of caffeic acid, rosmarinic acid, and PVE on cortisol production in cortisone-induced HaCaT cells. The HaCaT cells were pretreated with caffeic acid, rosmarinic acid, and PVE for 1 h before treatment with cortisone (100 μM). The concentration of cortisol in the culture medium was measured by ELISA. The results are mean ± standard deviation (SD) (n = 3). **P* < 0.01 vs. cortisone untreated control, ***P* < 0.05 vs. cortisone treated control.
