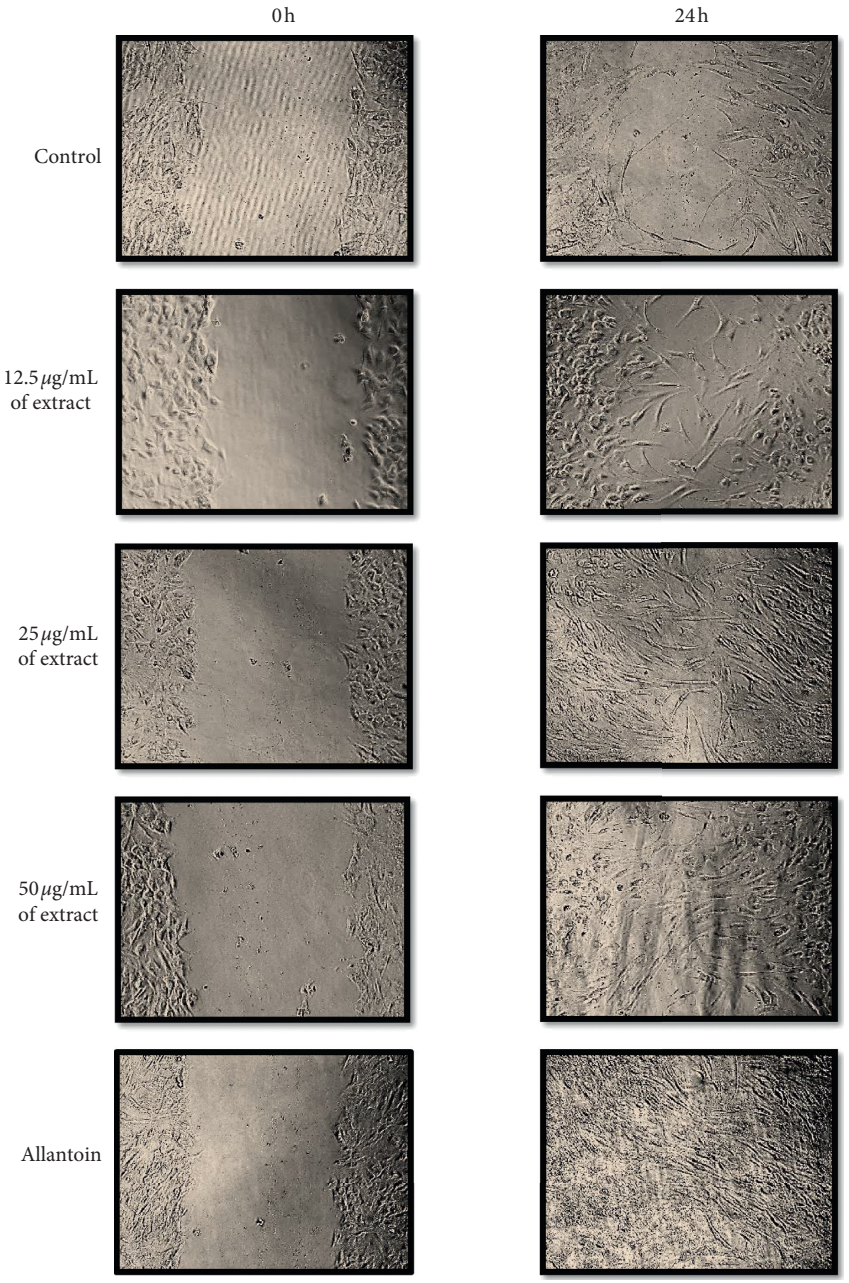
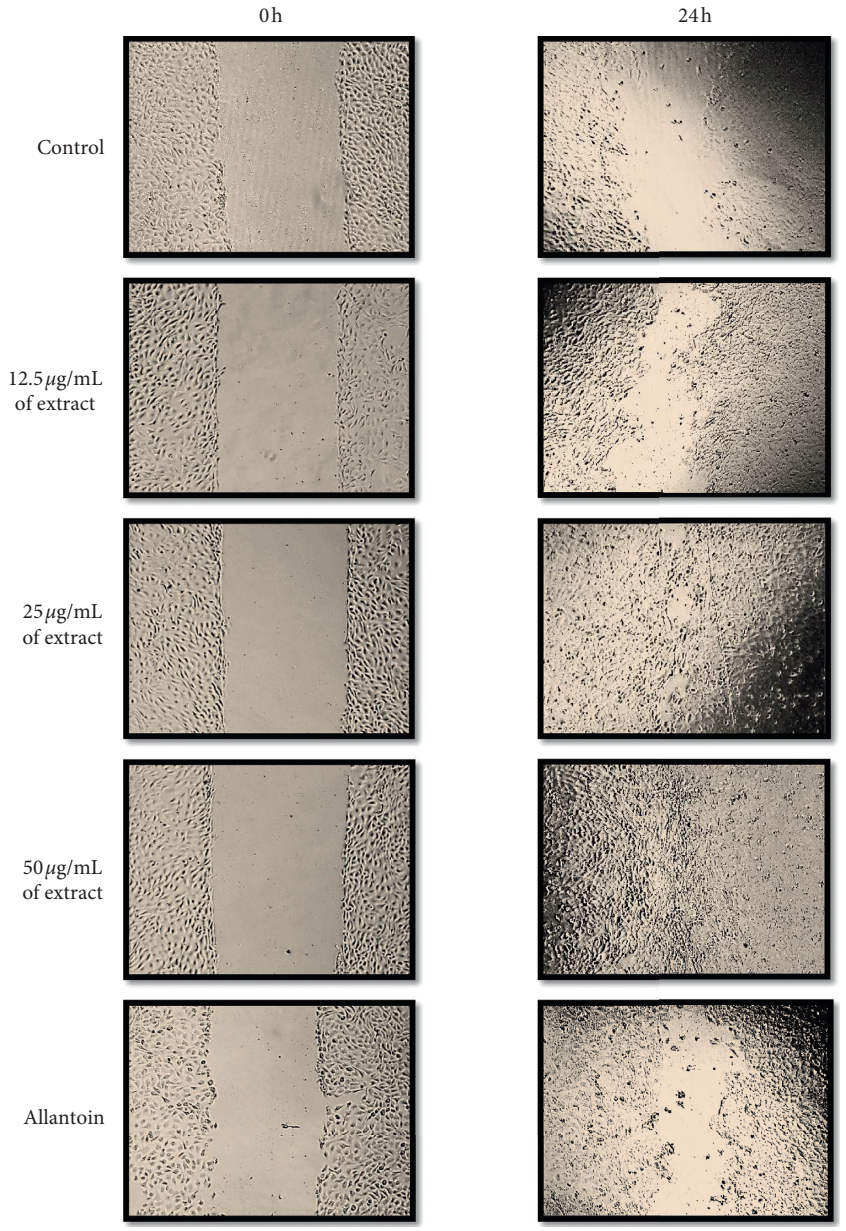
In the article titled "In Vitro Wound Healing Potential of Stem Extract of *Alternanthera sessilis*" [1], an area of overlap was identified in the control (0 h) and allantoin (0 h) panels of Figure 4(a). The authors apologize for this error, which was due to the image being saved to the incorrect file location. With the agreement of the handling editor, the revised figure is shown below.



(a)

Figure 4: Continued.



(b)

Figure 4: Continued.

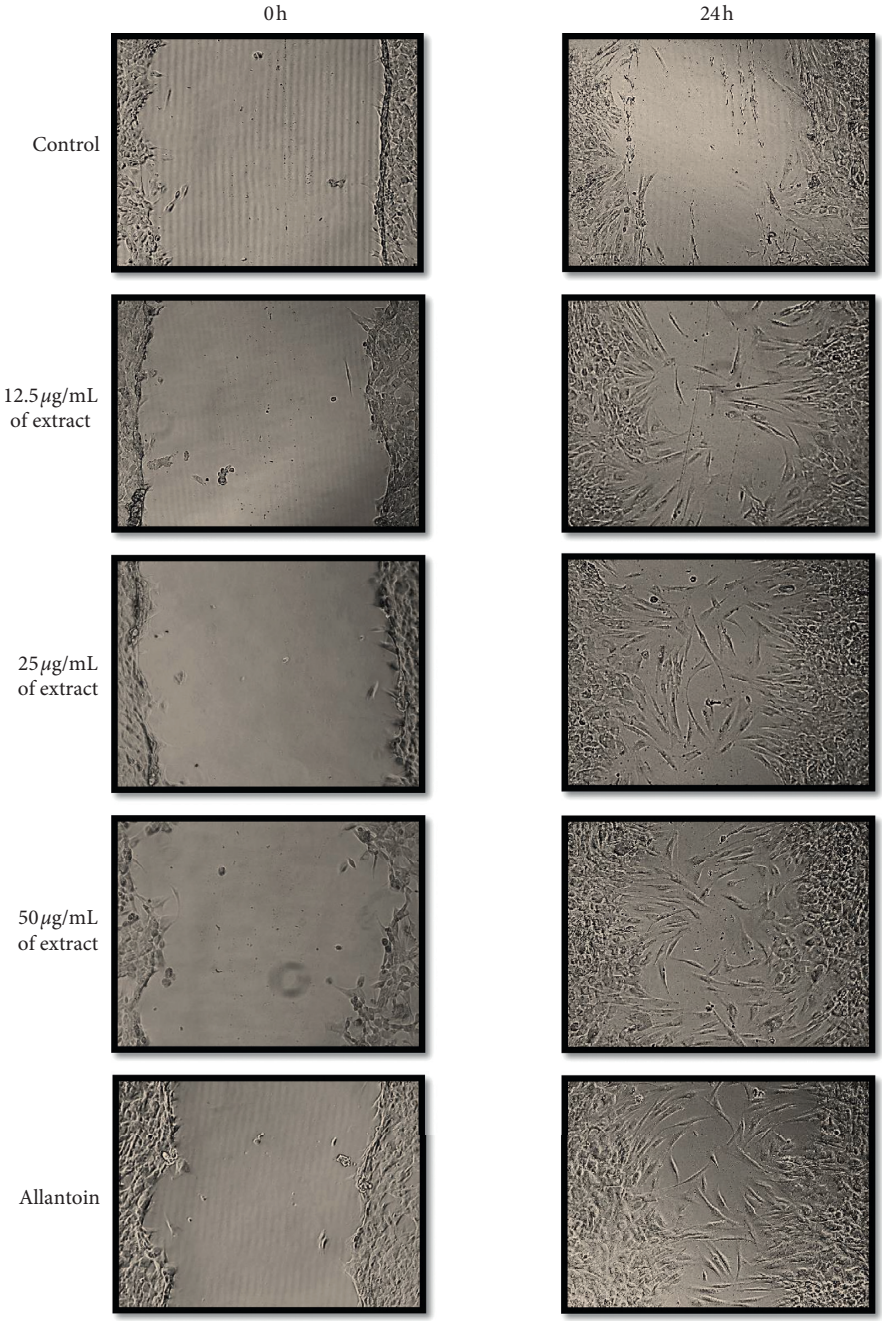


Figure 4: In vitro scratch assay (×40 magnification). NHDF (a), HaCaT (b), and HDF-D (c) cells were scratched and treated with and without treatment of varying concentrations of plant extract. Ethanolic extract of stem part of A. sessilis showed positive cell proliferation and cell migration as compared with control group (without treatment).
