

## A New Home

*Infectious Diseases in Obstetrics and Gynecology* is moving to The Woman's Hospital of Texas on June 26, 2000, in conjunction with my embarking on a new phase of my career. I am leaving the formal environment of academic medicine to devote my time to the practice of obstetrics and gynecology, with an emphasis on infectious diseases, and to editing the journal, which has developed nicely since its inception.

The manuscripts that are being submitted are of high quality, with more from our colleagues in Europe and Asia. I am planning to institute measures, with the assistance of the publisher, to increase readership. I would appreciate your suggestions or actions to facilitate our drive to increase subscriptions to the journal. The journal in its current format should have wide appeal.

There is increasing need for a journal dealing with infections in women. Although entitled *Infectious Diseases in Obstetrics and Gynecology*, this journal is not limited to articles dealing solely with obstetrics and gynecology. We consider for publication any manuscript pertaining to infection in women of all ages. The journal is a central source for information regarding infectious diseases in women.

The coming year will be an important year for the journal. Additions to the current contents include a section on immunization edited by Dr. Stanley Gall. Articles will address innovative developments, will provide updates on developing vaccines, and will summarize controversial issues such as the possible impact of BV on preterm delivery?

The journal will continue to publish scientific articles and will provide information that the practitioner can put to use. We believe that that our articles and practical information will increase the value of *Infectious Diseases in Obstetrics and Gynecology* to more physicians.

*Sebastian Faro, MD, PhD*  
*Editor-in-Chief*
