

Supplementary figure 1: T cell subsets in peripheral blood, synovial tissue and infrapatellar fat pad in knee osteoarthritis patients.

Isolated mononuclear cells were evaluated for their CD4⁺ and CD8⁺ co-receptor cell surface expression. Graphs comparing different T cell frequency of CD4⁺ T cells, CD8⁺ T cells and DN T cells in peripheral blood (PBMC) (n=48), synovial tissue (N=42) and infrapatellar fat pad (N=47). Each dot represents one patient. Mean values are shown with error bars.
