## SUPPLEMENTARY MATERIALS

Table S1 List of identifiable risk factors for CVD

| Identifiable risk factor | Criteria |
| :---: | :--- |
| LDL-C | $\geq 100 \mathrm{mg} / \mathrm{dL}$ |
| TG | $\geq 150 \mathrm{mg} / \mathrm{dL}$ |
| HDL-C | $<40 \mathrm{mg} / \mathrm{dL}(\mathrm{men}),<50 \mathrm{mg} / \mathrm{dL}(\mathrm{women})$ |
| Blood Pressure | $\geq 140 \mathrm{mmHg}$ (systolic) and/or $\geq 90 \mathrm{mmHg}$ (diastolic) |
| Baseline hypertension $^{\dagger}$ | Diagnosis record exists at baseline |
| Baseline obesity $^{\text {Baseline dyslipidemia }}{ }^{\ddagger}$ | Diagnosis record exists at baseline |
| Baseline CVD | Diagnosis record exists at baseline |
|  | Diagnosis record exists at baseline |

${ }^{\dagger}$ Counted only the subjects who did not meet the criteria for blood pressure; ${ }^{\ddagger}$ Counted only the subjects who did not meet the criteria for LDL-C, TG, and HDL-C; Abbreviations: LDL-C, low density lipoprotein Cholesterol; TG, triglyceride; HDL-C, high density lipoprotein cholesterol; CVD, cardiovascular disease

Table S 2 Sensitivity analysis results (using cutoff as 90-day prescription gap)

| Endpoint | $\mathbf{6 0 - d a y}$ prescription gap <br> $(\mathbf{n}=\mathbf{2 3 6})$ | 90-day prescription gap <br> $(\mathbf{n}=\mathbf{2 3 6})$ | P value |
| :---: | :---: | :---: | :---: |
| PDC, mean (SD) | $0.65(0.3)$ | $0.67(0.3)$ | 0.46 |
| Treatment duration, mean (SD) | $236.8(124.9)$ | $244.9(116.7)$ | 0.46 |
| Adherence, $\mathrm{n}(\%)$ | $115(48.7)$ | $115(48.7)$ | 0.93 |
| Continuation, $\mathrm{n}(\%)$ | $119(50.4)$ | $131(55.5)$ | 0.27 |

 tests for adherence and continuation

## Table S 3 Comparison of baseline characteristics between matched cohorts

| Variable | Subjects with $\geq 2$ identifiable <br> CVD risk factors (n=169) | Subjects with <2 identifiable <br> CVD risk factor (n=67) | p value |
| :--- | :---: | :---: | :---: |
| Demographics |  |  |  |
| Age (years), mean (SD) | $55.2(14.1)$ | $56.3(12.8)$ | 0.594 |
| Sex (male, \%) | 45.0 | 52.2 | 0.120 |
| Laboratory test results | $8.2(1.4)$ | $8.4(1.4)$ | 0.310 |
| HbA1c (\%), mean (SD) | $85.9(26.5)$ | $85.0(28.4)$ | 0.810 |
| eGFR (mL/min/1.72 m2), mean (SD) | $159.1(54.6)$ | $157.3(53.7)$ | 0.820 |

Concomitant medication

| Metformin users (\%) | 94.0 | 89.6 | 0.557 |
| :--- | :--- | :--- | :--- |
| Insulin users (\%) | 39.5 | 32.8 | 0.459 |
| DPP4 inhibitor users (\%) | 17.4 | 19.4 | 0.828 |
| SGLT2 inhibitor users (\%) | 19.8 | 19.4 | 1.000 |
| Sulfonylurea users (\%) | 60.5 | 71.6 | 0.120 |
| Comorbidities | 22.5 | 17.9 | 0.549 |
| Kidney disease (\%) | 29.0 | 34.3 | 0.518 |
| Eye disease (\%) | 11.8 | 13.4 | 0.907 |
| Neuropathy (\%) |  |  |  |

$\overline{\text { CVD, Cardiovascular disease; SD, standard deviation; HbAlc, glycated hemoglobin A1c; GFR, glomerular filtration rate; PG, postprandial glucose; DPP4, dipeptidyl peptidase 4; SGLT2, }}$ sodium glucose co-transporter 2 ; p values were calculated using Student's $t$-tests and $\chi^{2}$ tests for continuous and categorical variables, respectively.

Table S 4 Comparative analysis of endpoints in patients with and without high CVD risk

| Endpoint | Subjects with $\geq 2$ identifiable CVD <br> risk factors (n=169) | Subjects with <2 identifiable CVD <br> risk factors (n=67) | P value |
| :--- | :---: | :---: | :---: |
| PDC, mean (SD) | $0.63(0.34)$ | $0.69(0.34)$ | 0.219 |
| Treatment duration, mean (SD) | $230.5(125.0)$ | $252.6(123.9)$ | 0.221 |
| Adherence, $\mathrm{n}(\%)$ | $78(46.2)$ | $37(55.2)$ | 0.210 |
| Continuation, $\mathrm{n}(\%)$ | $80(47.3)$ | $39(58.2)$ | 0.132 |

$\overline{\text { SD, standard deviation; PDC, proportion of days covered; CVD, cardiovascular disease; P value determined by Student's } t \text {-tests for PDC and treatment duration and by } \chi^{2} \text { tests for adherence }}$ and continuation

Table S 5 Comparative analysis of endpoints in patients with and without high CVD risk (sensitivity analysis)

| Endpoint | Patients with $\geq \mathbf{3 ~ C V D ~ r i s k ~}$ <br> $(\mathbf{n}=\mathbf{7 7})$ | Patients with $<\mathbf{3}$ CVD risk <br> $(\mathbf{n}=\mathbf{1 5 9 )}$ | P value |
| :--- | :---: | :---: | :---: |
| PDC, mean (SD) | $0.66(0.35)$ | $0.64(0.34)$ | 0.62 |
| Treatment duration, mean (SD) | $242.5(125.6)$ | $233.9(124.8)$ | 0.62 |
| Adherence, $\mathrm{n}(\%)$ | $39(50.6)$ | $76(47.8)$ | 0.68 |
| Continuation, $\mathrm{n}(\%)$ | $40(51.9)$ | $79(49.7)$ | 0.74 |

$\overline{S D}$, standard deviation; PDC, proportion of days covered; CVD, cardiovascular disease; P value determined by Student's t-tests for PDC and treatment duration and by $\chi^{2}$ tests for adherence and continuation

Figure S 1 Distribution of number of identifiable risk factors for cardiovascular disease (CVD)

Figure S 2 Kaplan-Meier curve for the comparison of time to treatment discontinuation on the matched cohorts between subjects with $3<$ CVD risk ( $\mathrm{n}=159$ ) and subjects with $\geq 3$ CVD risk(s) ( $n=77$ ). Median was not reached for subjects with $\geq 3$ CVD risks and was 292 days for subjects with $<3$ CVD risk factors. $P$ value was determined by log-rank test ( $\chi^{2}=0.1$, at 1 degree of freedom). Abbreviations: CVD, cardiovascular disease
