

**Reply of Experimental Animal Ethics Committee of Anhui University of Chinese
Medicine to Effects of Mechanism of Zhinao Capsule in Treating Alzheimer's
disease Based on Network Pharmacology Analysis and Molecular Docking
Validation**

Supervisor of Experimental Animal Ethics Committee of Anhui University of Chinese Medicine,

The experimental animal ethics committee of anhui university of Chinese medicine demonstrated the feasibility of the study "Mechanism of Zhinao Capsule in Treating Alzheimer's disease Based on Network Pharmacology Analysis and Molecular Docking Validation" by Dr. Yanzhen Ma, Hui Jiang, Experimental Center of Clinical Research, The First Affiliated Hospital of Anhui University of Chinese Medicine. The answers are as follows:

On the basis of the introduction of the research plan and information about informed consent, we believe that the subject meets the requirements of animal ethics in the selection of animal species, quantity design, feeding and modeling, therapeutic materials and execution, etc. After the committee's argument, we agreed on the study of "Mechanism of Zhinao Capsule in Treating Alzheimer's disease Based on Network Pharmacology Analysis and Molecular Docking Validation" by Dr. Yanzhen Ma, Hui Jiang and to carry out research by Experimental Center of Clinical Research, The First Affiliated Hospital of Anhui University of Chinese Medicine.
