

Figure S2: PerC cytokine levels of HIII and LIII mice injected with pristane. Mice were injected with pristane (TMPD) or saline (CTRL) and peritoneal lavage fluid was harvested after either 7 days (IL-4 - a; IL-17 - b) or 7 and 35 days (TNF- α - c; IFN- γ - d). Bars represent mean \pm 95% confidence interval of 1 or 2 experiments with 4-6 animals/group (two-way ANOVA followed by Bonferroni post-tests). *p<0,05; **p<0,01; ***p<0,001.
