

Supplementar Figure 1:

Supplementar Figure 1: Effect of CdrV and CBr on cell viability. Cells were incubated with CdrV or CBr (3.25, 6.5 and 13.0 µg/mL) or RPMI (control) from 1 to 12h, and cytotoxicity was assessed by (A) LDH (B) MTT assay. Values represent the mean \pm SEM from four animals (ANOVA).
