

Supplementary Figure 1

Supplementary Figure 1. Induction of miR-22 in immune cells and keratinocytes in IMQ-treated mice. Macrophages, T cells and keratinocytes were prepared from the skin tissues of IMQ-treated mice at the indicated times, and the levels of miR-22 was measured by qPCR analysis. Data are shown as mean \pm SD. N = 3, * p < 0.05, ** p < 0.01, *** p < 0.005, **** p < 0.001. RNA samples were collected and analyzed in our previous study (Miki, H. et al. *J Immunol.* **204**, 1892-1903 (2020)).
