5 FIGURE S1. Tumour Fractional Signal Loss Change. The fractional mean signal intensity loss as defined  
6 by  $(A-B)/B$  where A is the mean signal intensity at each time point and B is the mean signal intensity  
7 before injection over the same ROI. (\*) indicates a significant difference in the tumour mean signal  
8 intensity ratio between muJ591:MIC6 and PBS at 40 min after injection,  $p=0.05$ ) (Seq. C, TE = 8 ms).
