Figure S1. The electronic absorption of aqueous solution of $\mathbf{1}$ upon addition of (a) $\mathrm{Zn}^{2+}$, (b) $\mathrm{Fe}^{3+}$, (c) $\mathrm{Ni}^{2+}$, (d) $\mathrm{Co}^{2+}$, (e) $\mathrm{Na}^{+}$, and (f), $\mathrm{K}^{+}$

Figure S2. The electronic absorption of aqueous solution of $\mathbf{1}\left(5.0 \times 10^{-6} \mathrm{M}\right)$ upon addition of (a) $\mathrm{Hg}^{2+}$ (0-10 equivalent), (b) $\mathrm{Pb}^{2+}$ ( $0-10$ equivalent), (a) $\mathrm{Cd}^{2+}(0-10$ equivalent), and (a) $\mathrm{Cu}^{2+}$ ( $0-10$ equivalent) ions

Figure S3. The electronic absorption spectra of aqueous solution of $\mathbf{1}\left(5.0 \times 10^{-6} \mathrm{M}\right)$ upon addition of increasing amount $\left[0.12,0.25,0.38,0.51,0.63,0.89\right.$, and $1.27\left(\times 10^{-6}\right.$ $\mathrm{M})]$ of $\mathrm{Hg}^{2+}, \mathrm{Pb}^{2+}, \mathrm{Cd}^{2+}$, and $\mathrm{Cu}^{2+}$ ions. The inset displays a zoomed view of the visible portion of the spectra

Figure S4. The electronic absorption of aqueous solution of $\mathbf{1}\left(5.0 \times 10^{-6} \mathrm{M}\right)$ upon addition of increasing amount (a) $\left[0,0.5,1.25,2,2.5\right.$, and $\left.3.75\left(\times 10^{-6} \mathrm{M}\right)\right] \mathrm{Cu}^{2+}$ and $\mathrm{Hg}^{2+}$ (b) $\left[0,0.5,1.25,2.5,3.75\right.$, and $\left.5\left(\times 10^{-6} \mathrm{M}\right)\right] \mathrm{Cu}^{2+}$ and $\mathrm{Pb}^{2+}$ (c) $[0,0.5$, and 1.25 $\left.\left(\times 10^{-6} \mathrm{M}\right)\right] \mathrm{Cu}^{2+}$ and $\mathrm{Cd}^{2+}$ ions

Figure S5. The electronic absorption of aqueous solution of $\mathbf{1}\left(5.0 \times 10^{-6} \mathrm{M}\right)$ upon addition of $\mathrm{Ca}^{2+}$ ( $0-16$ equivalent)

Figure S1. The electronic absorption of aqueous solution of $\mathbf{1}$ upon addition of (a)
$\mathrm{Zn}^{2+}$, (b) $\mathrm{Fe}^{3+}$, (c) $\mathrm{Ni}^{2+}$, (d) $\mathrm{Co}^{2+}$, (e) $\mathrm{Na}^{+}$, and (f), $\mathrm{K}^{+}$

Figure S2. The electronic absorption of aqueous solution of $\mathbf{1}\left(5.0 \times 10^{-6} \mathrm{M}\right)$ upon addition of (a) $\mathrm{Hg}^{2+}$ ( $0-10$ equivalent), (b) $\mathrm{Pb}^{2+}$ ( $0-10$ equivalent), (a) $\mathrm{Cd}^{2+}(0-10$ equivalent), and (a) $\mathrm{Cu}^{2+}$ ( $0-10$ equivalent) ions

Figure S3. The electronic absorption spectra of aqueous solution of $\mathbf{1}\left(5.0 \times 10^{-6} \mathrm{M}\right)$ upon addition of increasing amount $[0.12,0.25,0.38,0.51,0.63,0.89$, and 1.27 ( $\times$ $\left.\left.10^{-6} \mathrm{M}\right)\right]$ of $\mathrm{Hg}^{2+}, \mathrm{Pb}^{2+}, \mathrm{Cd}^{2+}$, and $\mathrm{Cu}^{2+}$ ions. The inset displays a zoomed view of the visible portion of the spectra

Figure S4. The electronic absorption of aqueous solution of $\mathbf{1}\left(5.0 \times 10^{-6} \mathrm{M}\right)$ upon addition of increasing amount (a) $\left[0,0.5,1.25,2,2.5\right.$, and $\left.3.75\left(\times 10^{-6} \mathrm{M}\right)\right] \mathrm{Cu}^{2+}$ and $\mathrm{Hg}^{2+}$ (b) $\left[0,0.5,1.25,2.5,3.75\right.$, and $\left.5\left(\times 10^{-6} \mathrm{M}\right)\right] \mathrm{Cu}^{2+}$ and $\mathrm{Pb}^{2+}$ (c) $[0,0.5$, and 1.25 $\left.\left(\times 10^{-6} \mathrm{M}\right)\right] \mathrm{Cu}^{2+}$ and $\mathrm{Cd}^{2+}$ ions

Figure S5. The electronic absorption of aqueous solution of $\mathbf{1}\left(5.0 \times 10^{-6} \mathrm{M}\right)$ upon addition of $\mathrm{Ca}^{2+}\left(0-16 \mu \mathrm{~L}\right.$ of $\left.1 \times 10^{-3} \mathrm{M}\right)$
