

Suppl. Fig. 1

Supplementary figure 1: MDSC and Treg recruitment in B16-F1 late stage tumours.

(a-b) Tumour cell suspensions obtained from resected tumours were stained with the specific fluorescent conjugated antibodies for: CD11b, Gr1, CD4, CD25 and Foxp3 antibodies. (a) A representative dot plot of CD11b⁺/Gr1⁺ cells in the CD11b⁺ population cell is shown (n = five animals per experimental group). (b) A representative dot plot of CD25⁺/Foxp3⁺ in the CD4⁺ cell population is shown (n = five animals per experimental group).
