Supplementary Figure 1:

Exemplary blot from HUVEC lysates stimulated plasma with from our patients (lo = low Angpt-1/-2 concentration, hi = high Angpt-1/-2 concentration). The patient with high Angpt-2 and low Angpt-1 (left lane) shows a weak pTie2 / tTie2 response in comparison with the patient with the more physiological balance, i.e. low Angpt-2 and high Angpt-1 (right lane).
