

Supplementary Materials

Table S1. KBA and β BA quantification in five *Boswellia serrata* dry extracts (B-F). Data are reported as mean \pm SD (n = 3). Concentration is expressed in mg/g of dry extract.

Sample	KBA Concentration	β BA Concentration
B	28.74 \pm 2.73	85.07 \pm 5.97
C	nd	nd
D	34.47 \pm 3.93	115.35 \pm 13.90
E	46.12 \pm 6.75	115.56 \pm 14.76
F	24.65 \pm 1.59	82.70 \pm 10.97

nd = not detected

The supplementary material is a table reporting the concentrations of the two boswellic acids analyzed and discussed in the manuscript in five additional dry extracts of *Boswellia serrata*. The table **has been** added to emphasize the variability of boswellic acid concentration in different dry extracts obtained from the same botanical species.
