In the article titled “Antroquinonol Exerts Immunosuppressive Effect on CD8⁺ T Cell Proliferation and Activation to Resist Depigmentation Induced by H₂O₂” [1], there was an error in Figure 8. The figure should show a little higher expression of CXCL10, and CXCR3 was observed in the antroquinonol/H₂O₂ group. The corrected figure is shown below and is listed as Figure 1:
Figure 1: Antroquinonol decreased the expression of CXCL10 and CXCR3 induced by H$_2$O$_2$. Skin sections were examined with immunohistochemistry staining with anti-CXCL10 and anti-CXCR3 antibodies. Contrast to the control group, obvious high expression of CXCL10 and CXCR3 was detected in the H$_2$O$_2$ group, and a little higher expression of CXCL10 and CXCR3 was observed in the antroquinonol/H$_2$O$_2$ group. Scale bar = 50 μm.
