

They devour the flowers of golden rod and clover etc. with great zest.

All parties at Woods' Holl during the season insist upon it that they had no temperature at all approaching the freezing point.

I described (*Psyche* ii, 189) a similar specimen of *A. rotundifolia* — published in Dec., 1878; and Brunner speaking of the same species in his *Monogr. der Phaneropt.* (p. 269) says one Pennsylvania specimen has violet tegmina. He also gives instances of similar variation in other Locustarians. Lewis gives an instance of the same peculiarity in *Cyrtophyllum concavum* (*Proc. Acad. nat. sc. Philad.*, 1883, 44). *Samuel H. Scudder.*

MCNEILL ON TRYXALINAE. — The Davenport academy of natural sciences has just published, in an octavo pamphlet of 96 pages and six admirable plates, Prof. J. McNeill's Revision of the Truxalinae of North America. It is one of the most important pieces of recent work done on North American Orthoptera by American entomologists; for the Tryxalinae have been one of our least known though richest groups. The classification is an independent one and does not follow very closely the features of Brunner's general outline for the Tryxalinae of the world given four years ago, and which contained a relatively small portion of the genera here recognized by McNeill. Altogether 75 species are entered, referred to 31 genera, of which 11 are proposed as new. Only ten new species are described, which is an astonishingly small number for the country, since several new forms have been found in the East within recent years, and a great deal remains to be done even here. A full figure, generally with considerable additional detail

is given for every genus, but unfortunately the enlargement above nature is not indicated. The memoir places our small grasshoppers on a very different basis from that on which they have hitherto stood, and the figures alone are a striking addition to our means of study and determination.

A GENUS OF GRYLLIDAE HITHERTO UNRECORDED FROM THE UNITED STATES. — I have recently received from Mrs. Annie Trumbull Slosson specimens obtained in southern Florida of a new species of *Mogosiplistus*, which may be called *M. slossoni*. — It differs from all known species in its long pronotum, which is considerably longer than broad, a little broader posteriorly than anteriorly, the lateral canthi rounded, the posterior margin truncate, straight, the lateral lobes equally rounded anteriorly and posteriorly; the first joint of the hind tarsi is elongate and much more than twice as long as the hind tibial calcaria; the ovipositor as long as the hind tibia and tarsi taken together. The body is covered with gray scales, beneath which the thorax is testaceous and the abdomen black; the central portion of the outer face of the hind femora is also black; antennae castaneous. Length of body, ♀ 7.5 mm; ovipositor, 5 mm. Biscayne Bay, Fla., under bark of trees.

Mrs. Slosson writes that they are silvery and iridescent in life, and very agile and were found wherever she tore off bark from fallen trees.

The genus has been heretofore known in America only from Chili, the species from Cape St. Lucas Lower California referred here (*Mogoplistes*) by me belonging elsewhere. *Samuel H. Scudder.*

## A. SMITH & SONS, 269 PEARL STREET, New York.

MANUFACTURERS AND IMPORTERS OF

**GOODS FOR ENTOMOLOGISTS,**  
Klaeger and Carlsbad Insect Pins, Setting  
Boards, Folding Nets, Locality and  
Special Labels, Forceps, Sheet Cork, Etc.  
Other articles are being added, Send for List.

## A NEW VOLUME OF PSYCHE

Began in January, 1897, and will continue through three years. The subscription price (payable in advance) is \$5.00 per volume, or \$2.00 per year, postpaid. Numbers are issued on the first day of each month. Libraries and individuals generally ordering through subscription agencies (*which only take annual subscriptions*) will please notice that it is cheaper to subscribe for the entire volume at once directly of us.— Any early volume can be had for \$5.00, unbound. Address Psyche, Cambridge, Mass.

**Vols. 1-7, Complete, Unbound** = = = = = \$33.00.  
**Vols. 1-7, and Subscription to Volume 8** = = = = = \$37.00.  
**Vol. 7 contains over 500 pp. and 10 plates, besides other illustrations.**

Just Published, by Henry Holt & Co., New York.

### Scudder's Brief Guide to the Commoner Butterflies.

By SAMUEL H. SCUDDER. xi + 206 pp. 12mo. \$1.25.

An introduction, for the young student, to the names and something of the relationship and lives of our commoner butterflies. The author has selected for treatment the butterflies, less than one hundred in number, which would be almost surely met with by an industrious collector in a course of a year's or two year's work in our Northern States east of the Great Plains, and in Canada. While all the apparatus necessary to identify these butterflies, in their earlier as well as perfect stage, is supplied, it is far from the author's purpose to treat them as if they were so many mere postage-stamps to be classified and arranged in a cabinet. He has accordingly added to the descriptions of the different species, their most obvious stages, some of the curious facts concerning their periodicity and their habits of life.

### Scudder's The Life of a Butterfly. A Chapter in Natural History for the General Reader.

By SAMUEL H. SCUDDER. 186 pp. 16mo. \$1.00.

In this book the author has tried to present in untechnical language the story of the life of one of our most conspicuous American butterflies. At the same time, by introducing into the account of its anatomy, development, distribution, enemies, and seasonal changes some comparisons with the more or less dissimilar structure and life of other butterflies, and particularly of our native forms, he has endeavored to give, in some fashion and in brief space, a general account of the lives of the whole tribe. By using a single butterfly as a special text, one may discourse at pleasure of many; and in the limited field which our native butterflies cover, this method has a certain advantage from its simplicity and directness.

## The Butterflies of the Eastern United States and Canada.

With special reference to New England. By SAMUEL H. SCUDDER.

Illustrated with 96 plates of Butterflies, Caterpillars, Chrysalids, etc. (of which 41 are colored) which include about 2,000 Figures besides Maps and Portraits. 1958 Pages of Text.

Vol. 1. Introduction; Nymphalidae.

Vol. 2. Remaining Families of Butterflies.

Vol. 3. Appendix, Plates and Index.

The set, 3 vols., royal 8vo, half levant, \$75.00 net.

HOUGHTON, MIFFLIN & CO., 4 Park St., Boston, Mass.
