

Mexico before. I can only account for its absence from the Biologia Cent.-Amer. by supposing that it has been confounded with *Cisthene unifascia*, which it greatly resembles in markings.

ALEURODICUS MIRABILIS.

Aleurodes mirabilis Ckll., Psyche, June 1898, p. 225. Prof. C. H. T. Townsend found this species in quantity at Minatitlan, Mexico, April 25, 1898, on the under side of Anona leaves. Fortunately, he secured a single ♂ adult, which shows that the insect belongs to *Aleurodicus*. The anterior wings are slightly over 2 mm. long, and about $1\frac{1}{3}$ mm. broad; white, with two very pale grey bands; the first crossing the wing just before the fork of the median vein, but interrupted for a space below the vein; the second a dilute transverse cloud not far from the apex of the wing. Body about 2 mm. long, exclusive of the forceps, which is about $\frac{3}{4}$ mm. Color of body and legs very pale yellow; base of abdomen white; thorax between

wings light orange. Antennae orange at the middle. Eyes pale greenish, not divided. Easily known from *A. anonae* Morgan, by the markings on the wings of the adult, and the lingua longer than the sperculum in the pupa.

T. D. A. Cockerell.

PROCEEDINGS OF THE CLUB.

13 JANUARY, 1899 (cont.). Mr. J. W. Folsom said that *Isotoma besselsii* Pack. had not been recorded since its original description from specimens found in 1872 by the "Polaris" expedition in lat. $81^{\circ} 20'$ — $81^{\circ} 50'$ N., but that he had found this interesting collembolan in abundance last October on our own coast, occurring in large colonies under stones between tide-marks. Mr. Folsom added that his examples of this well-marked species agree perfectly with Packard's types, which he had already studied through the courtesy of the U. S. National Museum. A discussion followed as to the probable influence of ocean currents in disseminating maritime species.

Guide to the Genera and Classification of the Orthoptera of North America north of Mexico. By SAMUEL H. SCUDDER. 90 pp. 8°.

Contains keys for the determination of the higher groups as well as the (nearly 200) genera of our Orthoptera, with full bibliographical aids to further study. Sent by mail on receipt of price (\$1.00).
