

Supplementary Figure 1: Workflow of MSCs isolation

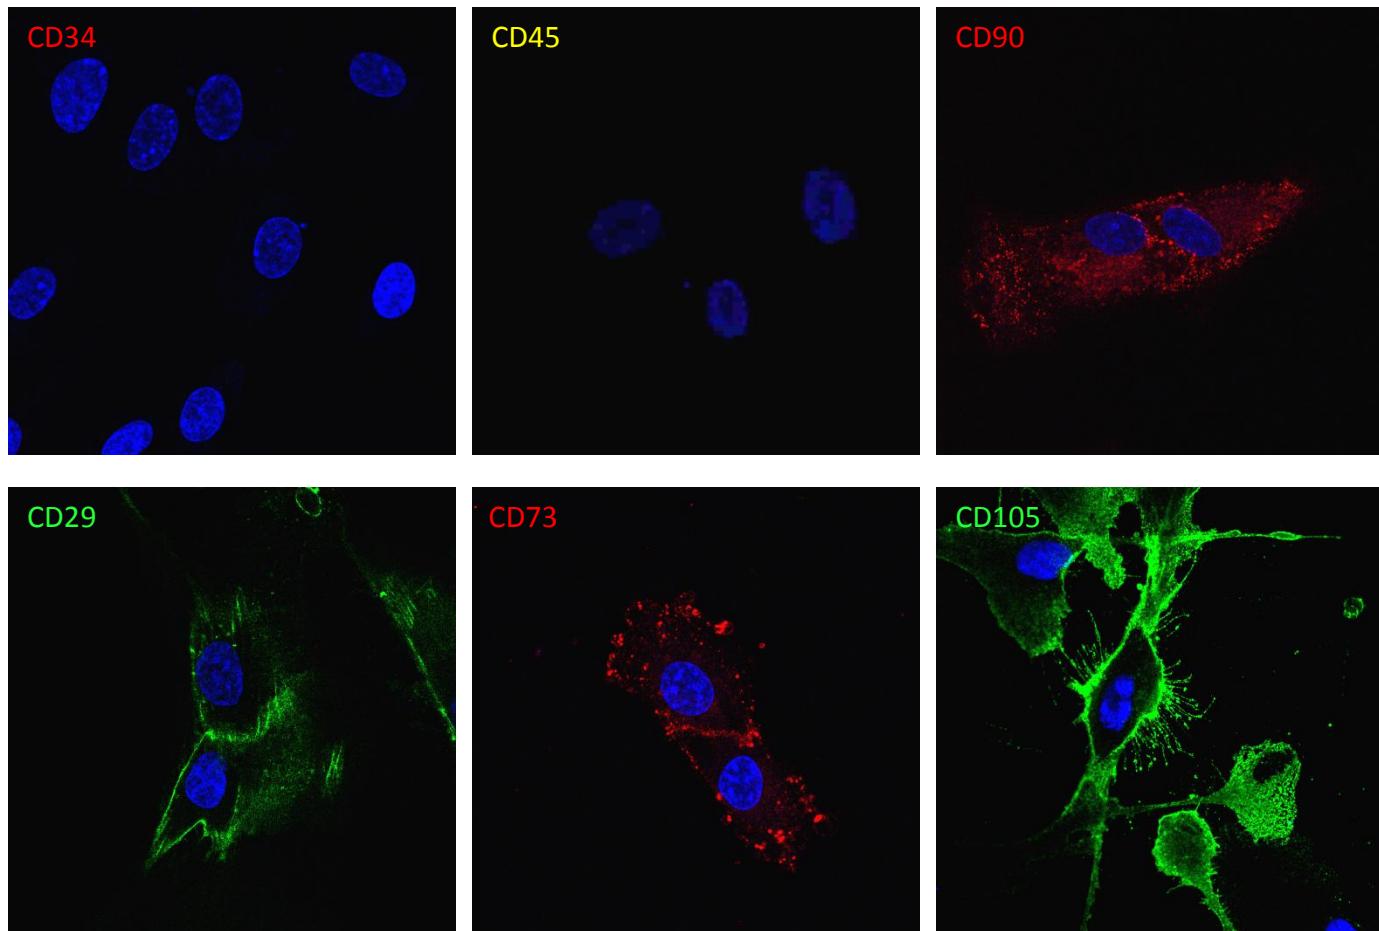

Supplementary Figure 2: Comprehensive analysis of MSCs markers on freshly isolated cells from the amniotic membrane.

Supplementary Figure 3: PI/Mb-MSCs constitute a very homogenous population after 4 passages

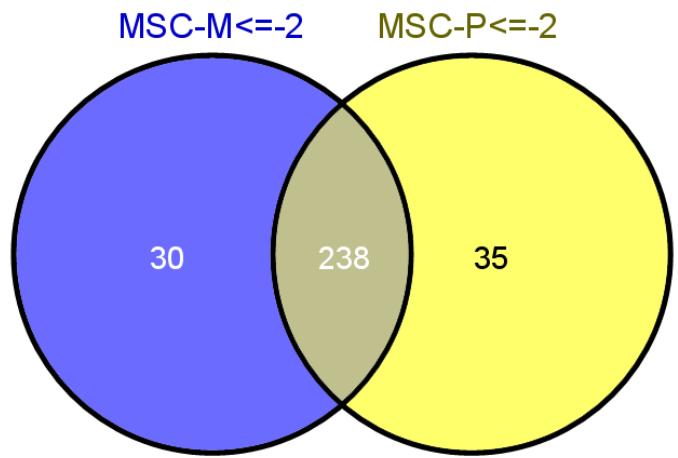

Supplementary Figure 4: Immunofluorescence staining of placenta and membrane derived MSCs.

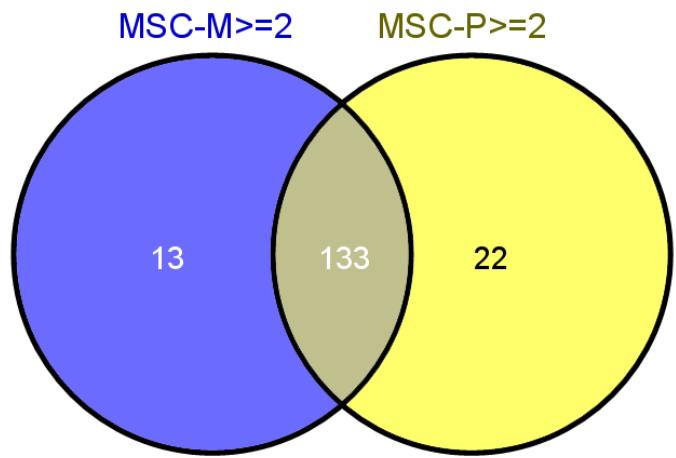

Supplementary Figure 5: Venn analysis of genes up and down regulated in PI/Mb-MSCs as compared to BM-MSCs.

A

B

Supplementary Table 1: Lists of genes differentially expressed between bone Marrow MSCs and fetal membrane MSCs.

Genes overexpressed in BMMSCs as compared to MbMSCs			
Gene name	Accession Nb	Fold increase	P value

Supplementary Figure 1: Workflow of MSCs isolation

After retrieval of placenta and membrane, tissues were minced into small pieces of less than 1mm² and incubated for 1h in collagenase, hyaluronidase, dispase and DNase as described in Materials and methods. Mononucleated cells were then isolated using Ficoll gradient. 2 million cells were plated in MSCs media. 1 million of cells were stained for MSCs sorting on SORP FACS Aria 2. Sorted cells were plated on MSCs media. After p=4 all the cells were analyzed for MSCs markers expression and transcriptomic analysis.

Supplementary Figure 2: Comprehensive analysis of MSCs markers on freshly isolated cells from the amniotic membrane.

Cells were stained with mouse anti human CD45-Amcyan, CD34-FITC, CD29-APC-CY7, CD90-AF700, CD73-PE, CD105-AF647.

After FSC-A/SSC-A selection, only CD45⁻ and CD34⁻ cells were considered. We analyzed the expression of the different markers in the freshly isolated cells from the amniotic membrane. We demonstrate that the CD73⁺ CD105⁺ population was quite homogenous expressing also CD29 and CD90. The CD29⁻ CD90⁻ was also a homogenous population containing mostly CD73⁻ CD105⁻ cells. The other cell populations were quite heterogenous in the distribution of the different MSCs markers.

Supplementary Figure 3: PI/Mb-MSCs constitute a very homogenous population after 4 passages

Exemple of MSCs marker expression of Mb-MSCs. After cell sorting of the different cell populations. We allowed the cells to grow in the MSC media as defined in materials and methods. We then performed after 4 passages flow cytometry analysis of the adherent cells. We can see that there is a quite homogenous population of cells negative for CD45 and CD34 but positive for CD90, CD29, CD73 and CD105. The same results were obtained for all sub-populations sorted previously (data not shown).

Supplementary Figure 4: Immunofluorescence staining of placenta and membrane derived MSCs.

Marker expression of cells derived from placenta and membrane analyzed by FACs were also analyzed by immunofluorescence staining. As in FACs staining cells were positive for CD90, CD29, CD73, CD105, and negative for CD34 and CD45.

Supplementary Table 1: Lists of genes differentially expressed between bone Marrow MSCs and fetal membrane MSCs.

Supplementary Table 2: Lists of genes differentially expressed between bone Marrow MSCs and placenta MSCs.

Supplementary Table 3 . List of genes involved in developmental processes over-expressed in Mb-MSC compares to BM-MSC.

Supplementary Table 4. List of genes involved in adhesion and matrix interaction over-expressed in BM-MSC compare to Mb-MSC.
