

Figure S2 MSCs form spheroids at different cell concentrations in 20% KSR containing medium.

(A) hMSC spheroids generated from MSCs at passage 3 in L-DMEM with 20% KSR at different cell concentrations; **(B)** Statistic analysis of hMSC spheroids diameter cultured in different concentrations of KSR in L-DMEM medium. Spheroid diameters were measured from captured images ($n = 12-20$), and values show mean \pm SD ($n = 3$). Scale bars: 100 μm
