In the article titled "Excretory Function of Intestinal Tract Enhanced in Kidney Impaired Rats Caused by Adenine" [1], there were two errors, which should be corrected as follows:

- (i) The gender of rats used for the experiment was wrongly mentioned as "female." This should be corrected as "male."
- (ii) In Figure 4 legend, the value of serum uric acid in normal rats "21.93  $\pm$  6.98 µg/ml" should be corrected to "20.93  $\pm$  6.98 µg/ml."

The authors would like to apologize for any inconvenience caused.
